

History of Data Visualization

Michael Friendly
Psych 6135

<https://friendly.github.io/6135>

?

Orienting questions

History in context

What motivated graphical inventions?

What was the communication goal?

How does it relate to other developments?

- What were the pre-cursors?

How has this idea been used or re-invented today?

3

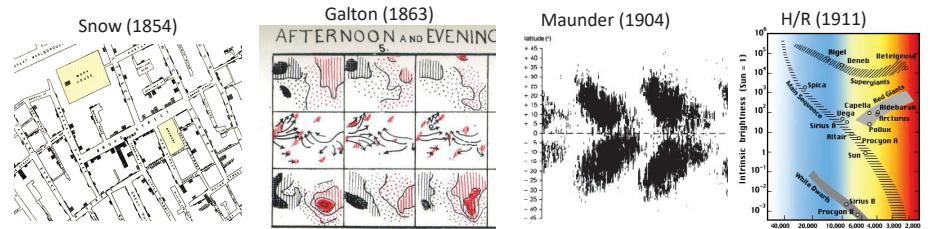

Outline

- Overview:
 - Roles of graphics in scientific discovery
 - Visualizing history: The *Milestones Project*
- Milestones tour of the history of data vis
 - Pre-history of visualization
 - The first statistical graph
 - The Big Bang: William Playfair
 - Influence of data, technology & visual thinking
- Other topics (later):
 - Moral statistics: the birth of social science
 - Graphs in the public interest: Nightingale, Farr and Snow
 - The Golden Age of statistical graphics

2

Orienting Q: Visualization-based discoveries ??

- When have graphics led to discoveries that might not have been achieved otherwise?
 - Snow (1854): cholera as a water-borne disease
 - Galton (1863): anti-cyclonic weather patterns
 - E.W. Maunder (1904): 11-year sunspot cycle
 - Hertzsprung/Russell (1911): spectral classes of stars

4

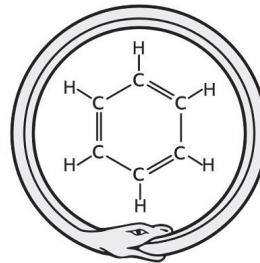

Orienting Q: Visualization-based discoveries ??

- In the history of graphs, what features, and data led to such discoveries?
 - What were they thinking??
 - What visual ideas/representations were available?
 - What was needed to see/understand something new?
- As we go forward, are there any lessons?
 - What are the Big Questions for today?
 - How can data visualization help?

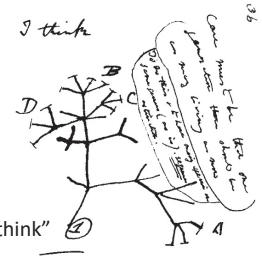

5

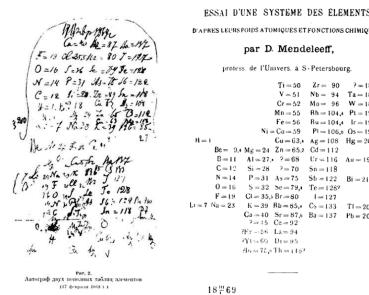

Visual thinking & scientific discovery

Dreams and snakes
August Kekulé (1862) discovers the structure of benzene in a **dream**

Tree of evolution
Darwin (1859) **imagines** generations of species – “I think”

Solitaire and the periodic table
Mendeleev (1869) organized chemical elements after a **mental image** of cards on a table.

See: <https://medium.com/@michael.friendly/visual-thinking-graphic-discoveries-128468677592>

How to visualize travel? A route map!

In 1675, chartmaker John Ogilby told a graphic story of what you would see on a travel from London to Land's End

What was he thinking?

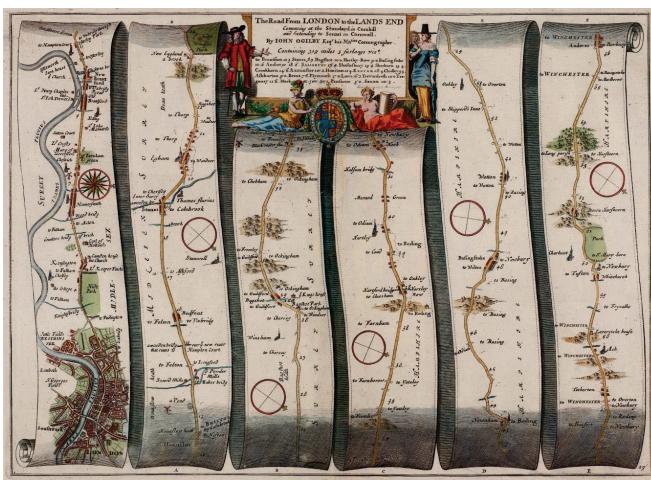

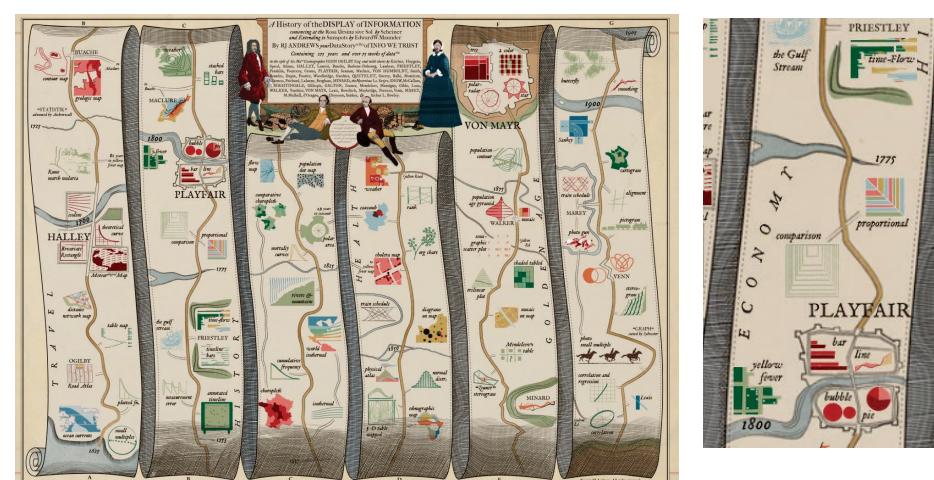

Image: [https://commons.wikimedia.org/wiki/File:Ogilby_-_The_Road_From_LONDON_to_the_LANDS_END_\(1675\).jpg](https://commons.wikimedia.org/wiki/File:Ogilby_-_The_Road_From_LONDON_to_the_LANDS_END_(1675).jpg)

7

In 2017, RJ Andrews adapts Ogilvie's form show the history of data visualization.

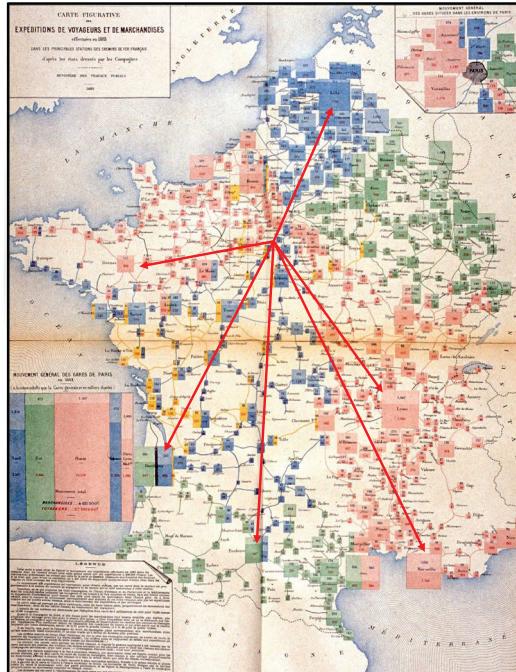

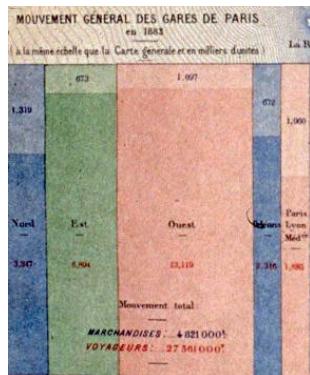

The online version, <https://history.infowetrust.com/>, is fully interactive, with details about the images on this journey.

8

Why study history of #datavis?

Those who don't know history are doomed to plagiarize it.

Recursive mosaic: Distribution of passengers and goods from the Paris railways to the rest of France [Album, 1884, pl. 11]

Les Chevaliers des Albums

Antoine de Falguerolles

Gilles Palsky

Antony Unwin

Ian Spence

Howard Wainer

Michael Greenacre

RJ Andrews

Sandra Rendgen

Stephen Stigler

David Rumsey

Quest for the Albums

- British library, BNF, Library of Congress: just a few copies
- Richard Langdon, U of T Fisher Rare Book Library: check out this bookshop, 3 rue des Beaux Arts, Paris
 - A complete set: all albums 1879 – 1899!
- Les Chevaliers
 - Collective purchase, owned by all, each held “in trust” by one member
 - “chevaliers”: Foster a spirit of collegial study of history of data visualization & thematic cartography
 - Conference sessions: RC33 (Cologne, 2000), GFKL (Dortmund, 2004), JSM (Toronto, 2004), ...
 - Regular “Chevalier Lunch”

10

The Milestones Project

Milestones in the History of Thematic Cartography, Statistical Graphics, and Data Visualization

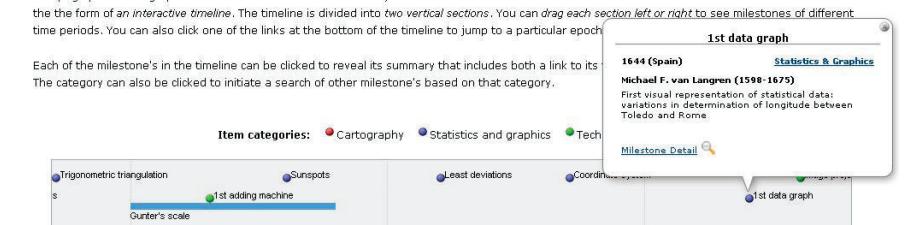

An illustrated chronology of innovations by Michael Friendly and Daniel J. Denis

Timeline

This page provides a graphic overview of the events in the history of data visualization that we call “**milestones**.” These milestones are shown below in the form of an *interactive timeline*. The timeline is divided into two *vertical sections*. You can *drag each section left or right* to see milestones of different time periods. You can also click one of the links at the bottom of the timeline to jump to a particular epoch.

Each of the milestone’s in the timeline can be clicked to reveal its summary that includes both a link to its category. This category can also be clicked to initiate a search of other milestone’s based on that category.

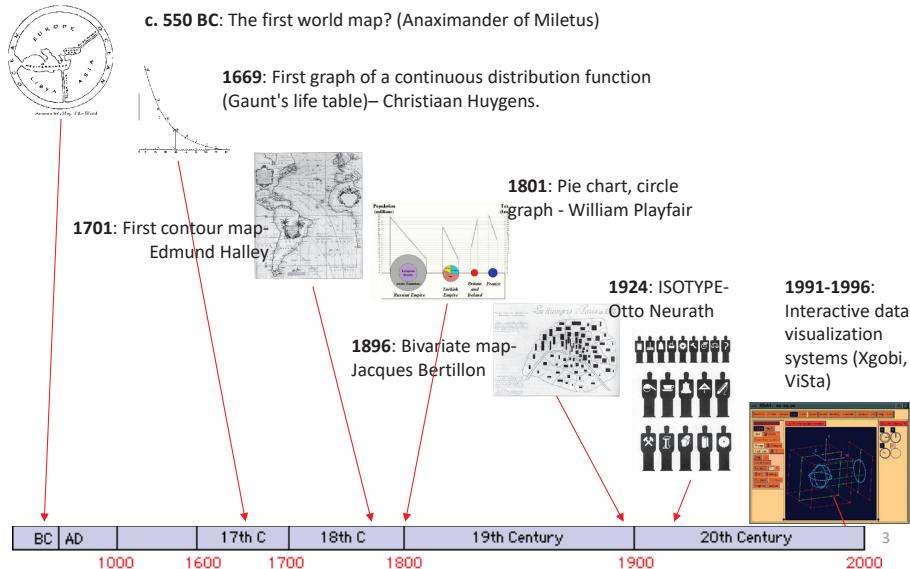

The web site: <http://datavis.ca/milestones> has an interactive timeline, allowing different kinds of search

12

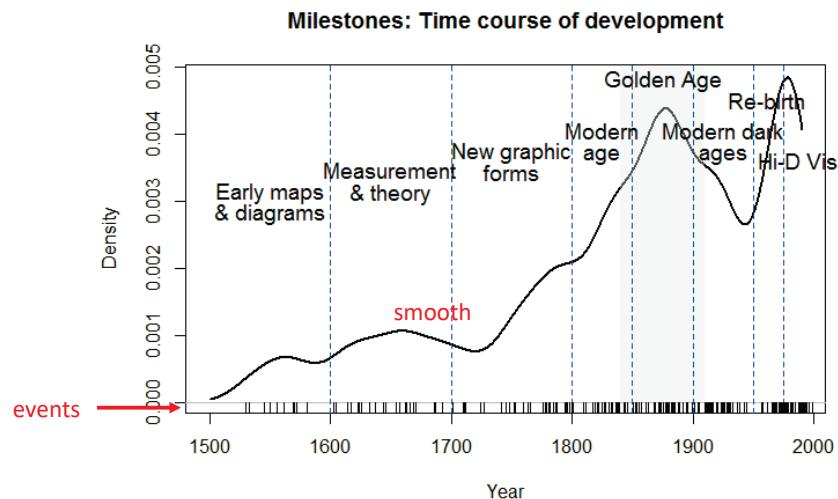

Milestones: Content Overview

Every picture has a story – Rod Stewart

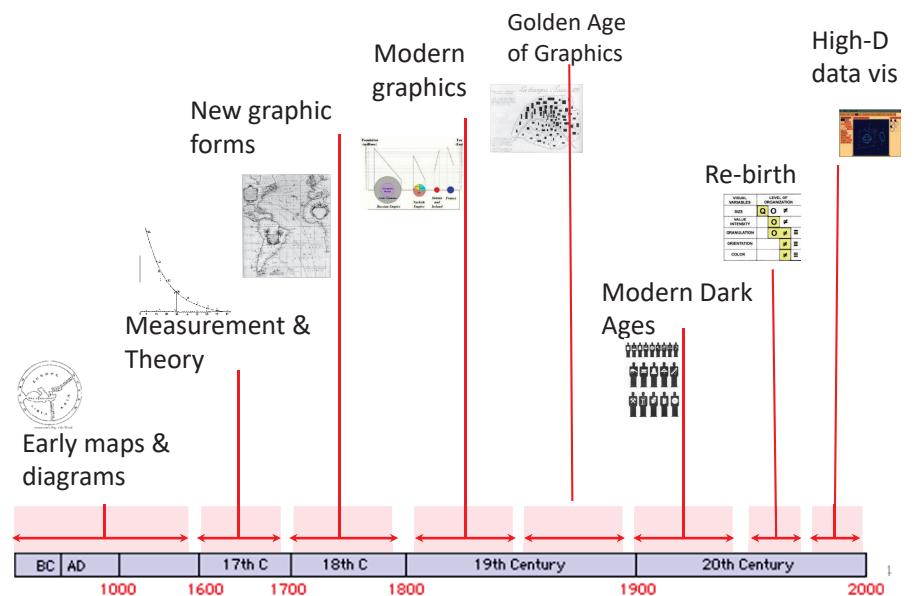

Statistical historiography

Historical information, suitably organized can be treated as data, and analyzed. This plot shows a smoothed frequency distribution of 248 milestones items over time, in relation to the named time periods.

Milestones Tour: Epochs

Prehistory of visualization

Lascaux Cave, ~ 15000 BCE, the “Sistine Chapel of pre-historic art”

Lascaux II, Main chamber

Lascaux: What were they thinking?

Lascaux II, Chamber of the Bulls

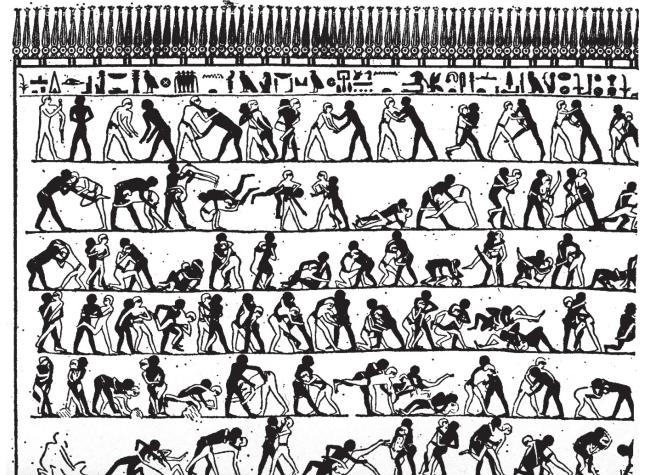

- Visual features:
 - show perspective, a sense of motion, rich use of color & texture
- What was the purpose?
 - Hunting success? NO (they hunted reindeer)
 - mostly symbolic – visual language, story of communal myths
- How to understand them?
 - A **cognitive revolution**: evidence for the modern human mind in Cro Magnon man
 - inner vision, visual thinking, mental imagery—a gleam in the mind's eye
- Other cave art [20000BC – 10000BC]: Altamira (Spain); Chauvet (France), Cueva de las Manos (Argentina), ...

17

Prehistory: Diagrams, graphic stories

Early Egyptian animated graphic diagram

Wrestling scene on east wall, tomb of Baqt at Beni Hasan (ca. 2000 BCE).

18

Pre 17th C.: Early maps & diagrams

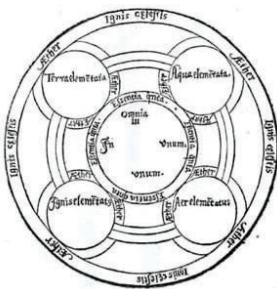

c. 550 BC: The first world map? (Anaximander of Miletus)

1350: Bar graph of theoretical function N. Oresme, France

1305: Mechanical diagram of knowledge- Ramon Llull, Spain

1375: Catalan Atlas, an exquisitely beautiful visual cosmography, perpetual calendar, and thematic representation of the known world- Abraham Cresques, Spain

BC	AD	17th C	18th C	19th Century	20th Century
1000	1600	1700	1800	1900	2000

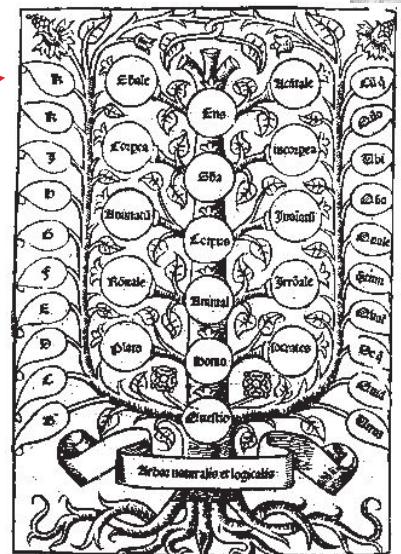

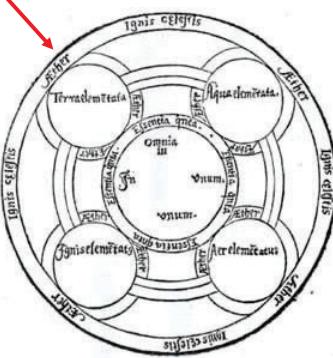

19

1305: Mechanical diagram of knowledge- Ramon Llull, Spain
Ars Magna → inspiration for symbolic logic (Leibnitz)

Tree of porphyry: Aristotle's categories of knowledge (center)

- Left: questions
- Right: rotating disks → answers

BC	AD	17th C	18th C	19th Century	20th Century
1000	1600	1700	1800	1900	2000

0

1375: Catalan Atlas, an exquisitely beautiful visual cosmography, perpetual calendar, and thematic representation of the known world- Abraham Cresques, Majorca, Spain [BNF: ESP 30]

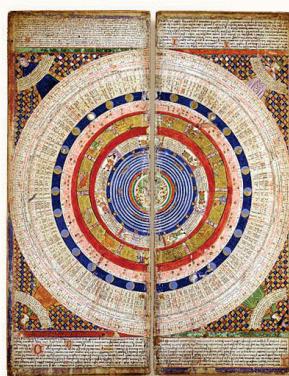

Western world

Eastern world (Marco Polo)

Perpetual calendar

21

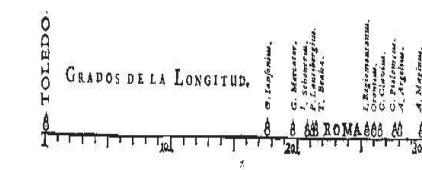

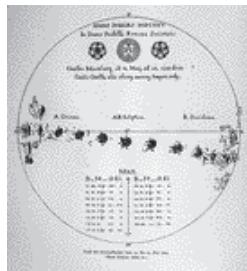

22

1600-1699: Measurement and Theory

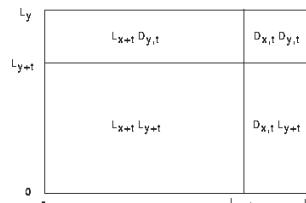

- The 17th century saw growth in theory and the dawn of attempts at visualization.
- Featured in this were:
 - the rise of **analytic geometry**: (x, y) coordinates (Descartes),
 - theories of **errors of measurement**: astronomical observations (Laplace)
 - the birth of **probability theory**-- games of chance, annuities (Fermat, DeMoivre, ...),
 - automatic **graphic recording** (Scheiner)
 - the first graphical representations of **statistical data** (van Langren)

1600-1699: Measurement and Theory

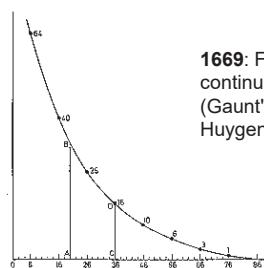

1626: Visual representations used to chart the changes in sunspots over time- Christopher Scheiner

1644: First visual representation of statistical data- M.F. van Langren, Spain

1669: First graph of a continuous distribution function (Gaunt's life table)-- Christiaan Huygens.

1693: First use of areas of rectangles to display probabilities of independent binary events- Edmund Halley, England

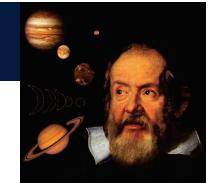

23

Sunspots: Galileo

1608: telescope (Hans Lippershey, NL)

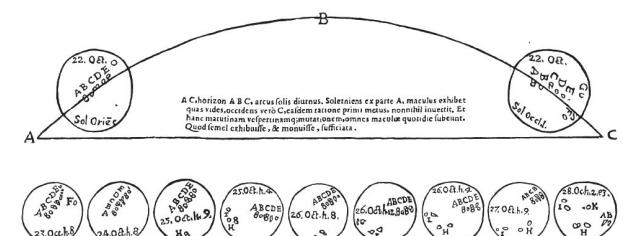

1610: Galileo (*Sidereus Nuncius*)

1611: Galileo records **movement** of sunspots over time (*Three letters on sunspots*, 1613)

Visual ideas:

- Animated graphic
- "Small multiples"
- Allows comparison
- Self-explaining diagram

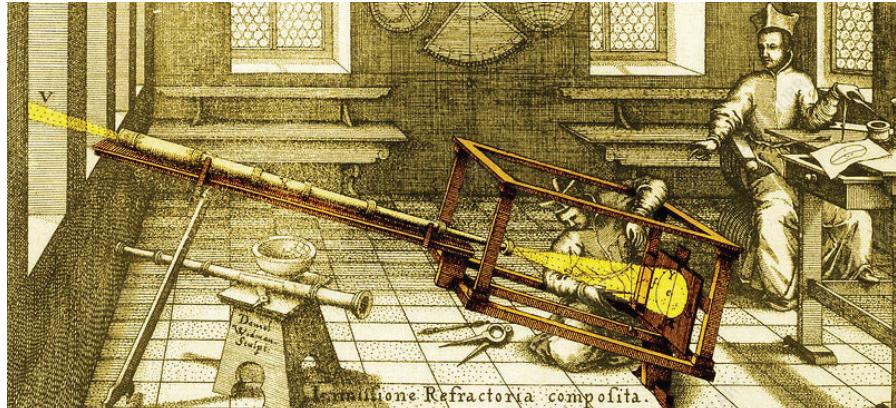

A+ for info design!

The idea of diagrams for visualizing phenomena had arrived.

24

Scheiner: systematic recording

1626: Christoph Scheiner invents helioscope & camera obscura to record sunspots (*Rosa Ursina sive Sol*, 1626-1630)

25

What else could he have done?

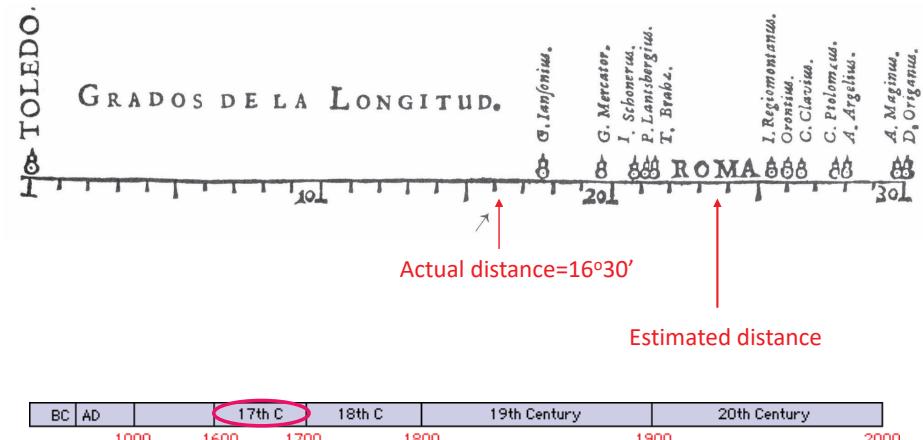

- What would occur to men of his time to convey a message to the king?
- ... he could used a *table* have sorted by *year* to establish *priority* (or show change).

Sorted by Priority

Year	Name	Longitude	Where
150	Ptolomeus, C.	27.7	Egypt
1471	Regiomontanus,	25.4	Germany
1501	Ianfonius, G.	17.7	
1530	Lantsbergius, P.	21.1	
1536	Schonerus, I.	20.8	Germany
1541	Argelius, A.	28.0	
1542	Ortonius	26.0	France
1567	Mercator, G.	19.6	Flanders
1567	Clavius, C.	26.5	Germany
1578	Brahe, T.	21.5	Denmark
1582	Maginus, A.	29.8	Italy
1601	Organus, D.	30.1	

Why the 1st statistical graph got it right

1644: First visual representation of statistical data: determination of *longitude* between Toledo and Rome- Michael Florent van Langren, Spain

- ... he could have sorted by *name*, to show *authority*.

Sorted by Authority

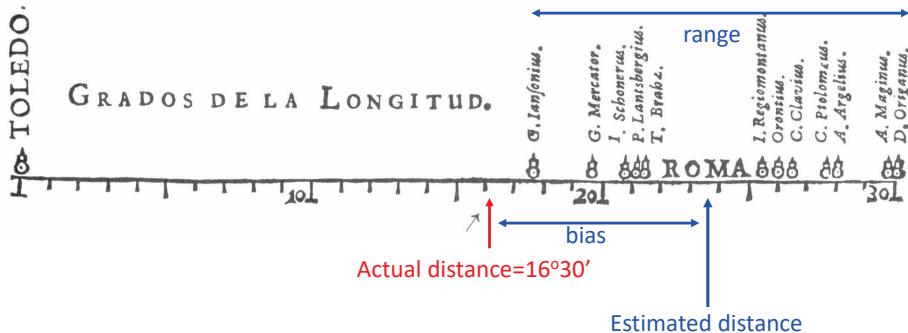

Name	Longitude	Year	Where
Argelius, A.	28.0	1541	
Brahe, T.	21.5	1578	Denmark
Clavius, C.	26.5	1567	Germany
Ianfonius, G.	17.7	1501	
Lantsbergius, P.	21.1	1530	
Maginus, A.	29.8	1582	Italy
Mercator, G.	19.6	1567	Flanders
Organus, D.	30.1	1601	
Ortonius	26.0	1542	France
Ptolomeus, C.	27.7	150	Alexandria
Regiomontanus, I.	25.4	1471	Germany
Schonerus, I.	20.8	1536	Germany

Sorted by Longitude

Longitude	Name	Year	Where
17.7	G. Ianfonius	1501	
19.6	G. Mercator	1567	Flanders
20.8	I. Schonerus	1536	Germany
21.1	P. Lantsbergius	1530	
21.5	T. Brahe	1578	Denmark
25.4	I. Regiomontanus	1471	Germany
26.0	Ortonius	1542	France
26.5	C. Clavius	1567	Germany
27.7	C. Ptolomeus	150	Egypt
28.0	A. Argelius	1541	
29.8	A. Maginus	1582	Italy
30.1	D. Organus	1601	

Only a graph shows...

- central location
- bias
- name labels– avoiding overplotting
- wide variability
- clustering, detached observations

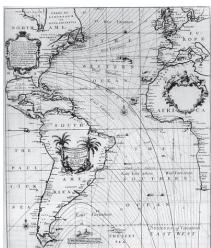

See: Friendly, M., & Kwan, E. (2003). Effect Ordering for Data Displays. *Computational Statistics and Data Analysis*, 43(4), 509–539; Friendly et al (2010). The First (Known) Statistical Graph: Michael Florent van Langren and the "Secret" of Longitude. *The American Statistician*, 64, 185–191

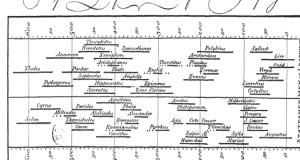

30

1700-1799: New graphic forms

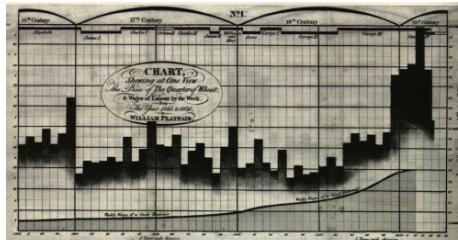

1701: Isobar map, lines of equal magnetic declination – Edmund Halley

1765: Historical time line (life spans of famous people) Joseph Priestley

1786: Bar chart, line graphs of economic data- William Playfair

1782: First topographical map- Marcellin du Carla-Boniface

BC AD 17th C 18th C 19th Century 20th Century 30

1000

1600

1700

1800

1900

2000

1700-1799: New graphic forms

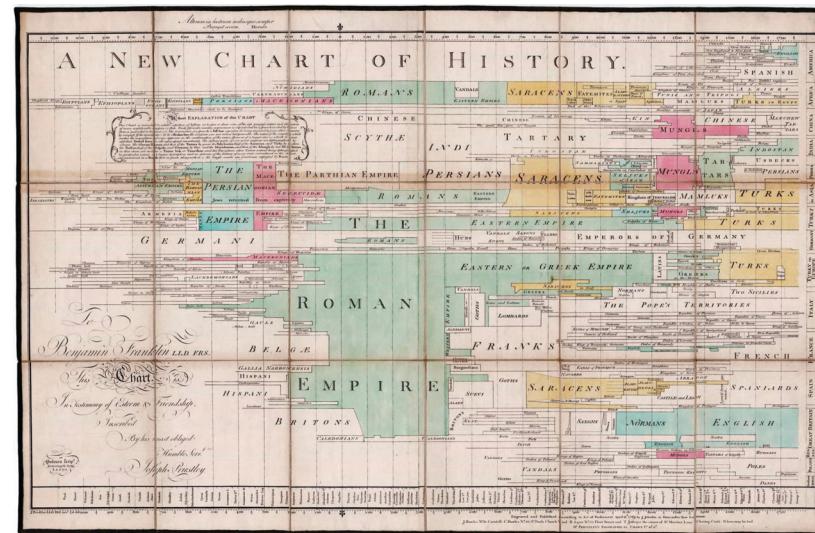

- The 18th century witnessed the germination of the seeds of visualization & visual thinking, planted earlier.
- Map-makers began to try to show more than just geographical position-- the beginnings of **thematic mapping** of physical quantities
 - topographical maps
 - iso- contour maps
- New graphic forms were invented:
 - bar chart,
 - line chart,
 - timelines

The Big Bang

1

1769: Visualization of the history of civilizations & empires over ~3000 years --Joseph Priestley

America

China

Italy

France

Spain

1000 BC 0 1000

33

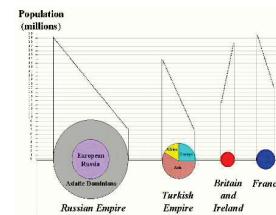

1800-1849: Beginning of modern data graphics

- The first half of the 19th century witnessed an explosive growth in statistical graphics and thematic mapping
 - Polar coordinates, log axes
 - Shaded (choropleth) maps of social data (literacy, crime)
- The **birth of data**: widespread national collection of data on social and medical issues
 - France: data on crime, literacy, prostitution, ... collected centrally
 - England: Births, deaths, disease mortality collected by Registrar General (William Farr)

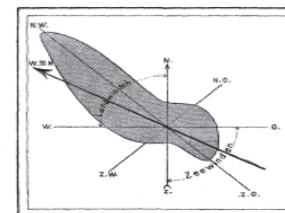

1800-1849: Beginning of modern data graphics

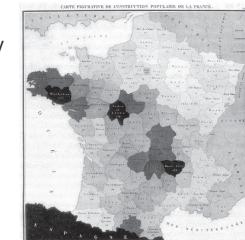

1801: Pie chart, circle graph invented- William Playfair

1843: Wind-rose (polar coordinates)- L. Lalanne

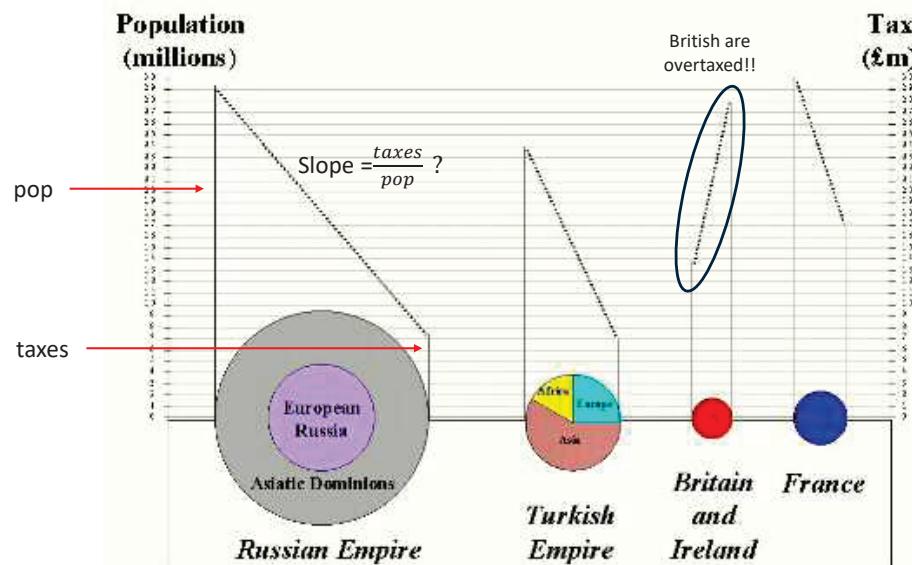

1826: First modern statistical map (illiteracy in France)- Charles Dupin

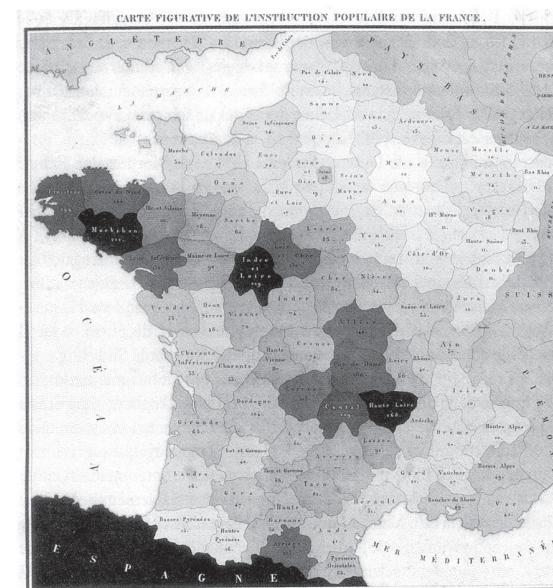

1844: variable-width, divided bars, area ~ cost of transport- C. J. Minard

1801: Pie chart, circle graph invented- William Playfair
(But with a graphic sin & fallacy – What are they?)

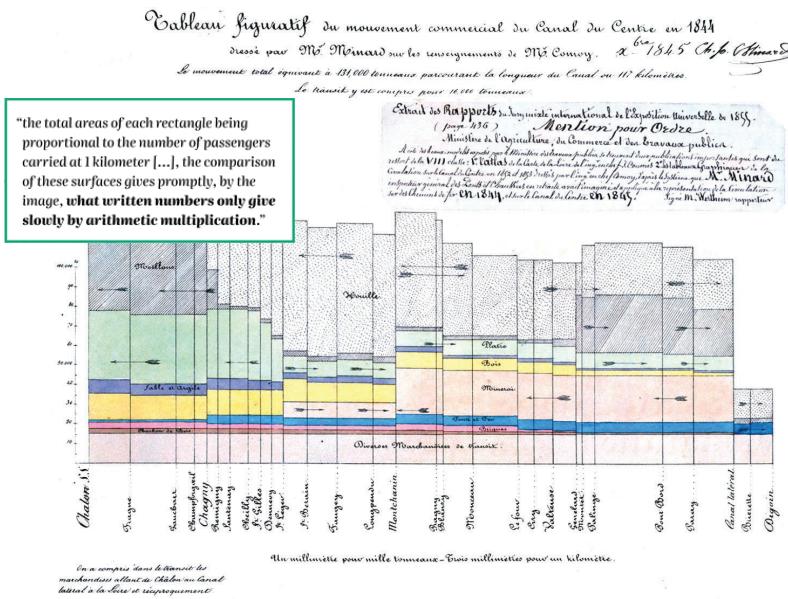

1826: The 1st choropleth map, showing the distribution of literacy in France – Baron Charles Dupin

Social variables became:

- visual
- subject to scientific discussion

1844: *Tableau-graphique*: variable-width, divided bars, area ~ cost of transport- Charles Joseph Minard

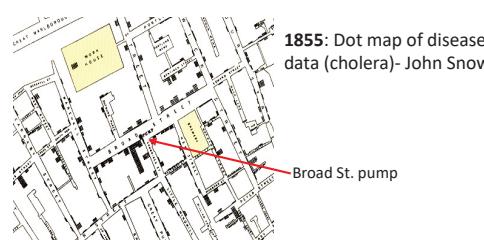

1850-1900: Golden Age

- By the last half of the 19th century the conditions for rapid growth of visualization had been established:
 - widespread data collection for planning, commerce, social theory
 - the beginnings of statistical theory and visual thinking
 - a wide range of graphic forms, reasonably well understood
 - technology:
 - lithography and color printing
 - automatic recording devices
 - calculation: machines & graphical calculators
 - The result was a perfect storm-- among the most exquisite graphics ever produced.

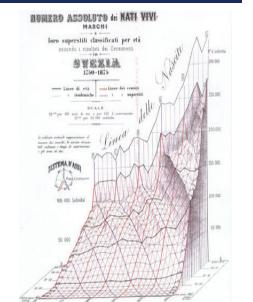

1850-1900: Golden Age

1884: Recursive multi-mosaic on a map-
Emile Cheysson

1896: Area rectangles on a map to display two variables and their product- Jacques Bertillon

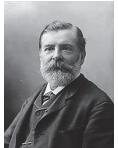

A historical map of Paris from 1891, titled "Les étrangers à Paris en 1891". The map shows the city's layout with various districts outlined. Black rectangular markers are placed throughout the city, representing foreign residents' addresses. A legend in the bottom left corner provides a key for these markers:

- Black square: Foreigner
- White square: French
- Black square with a white dot: French married to a foreigner
- White square with a black dot: Foreign married to a French person
- Black square with a diagonal line: Foreigner in a diplomatic or consular capacity
- White square with a diagonal line: French in a diplomatic or consular capacity

The map also includes labels for "Sous-préfecture de police" and "Préfecture de police". A small note at the top left reads: "Nouvelles causes et résultats des élections à Paris (Mai)".

- How to make human and animal motion subject to precise scientific study?
 - e.g., aerial locomotion of flying insects & birds
 - What is the frequency of wings of different species?
 - What are the mechanisms of wings to produce lift and forward motion?

A harness, designed to register the trajectory, force and speed of a bird's wing in flight

Marey (1870) *Animal Mechanism*

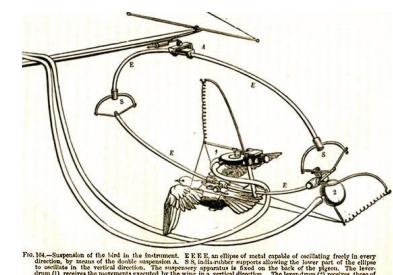

FIG. 164.—Suspension of the bird in the instrument. E E E E, an ellipse of metal capable of oscillating freely in every direction, by means of the double suspension A. S. S. elastic rubber supports allowing the lower part of the ellipse to oscillate in the vertical direction. The suspensory apparatus is fixed on the back of the pigeon. The lever-drum (1) receives the movements executed by the wing in a vertical direction. The lever-drum (2) receives those of the horizontal movements.

E.-J. Marey: Chronophotography

Rather than separate frames, Marey's "fusil photographique" allowed one to see motion continuously in a single static image.

This provides a visual analysis of a sprint:

- The runner takes about $\frac{1}{2}$ second (7 frames) to make it to an upright position
- Successive frames alternate between power push from the hind leg to landing on the opposite leg

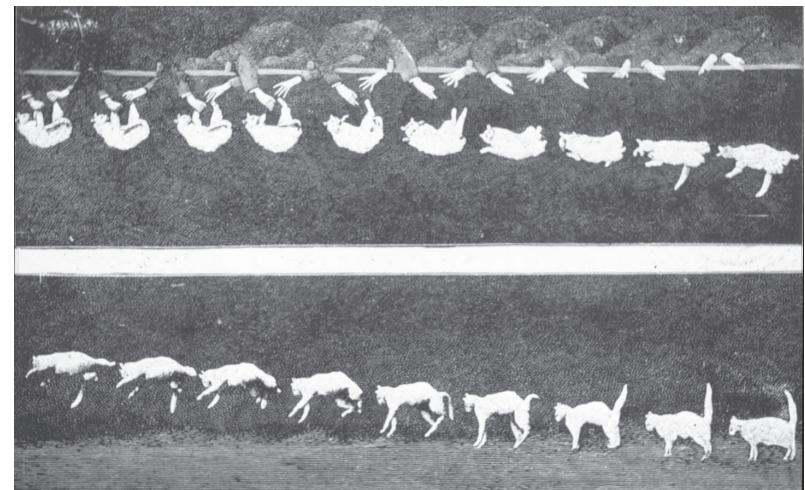

Source: <https://lightsmellsloud.wordpress.com/tag/etienne-jules-marey/>

43

The Falling Cat Problem

Another fundamental problem answered by chronophotography:

- How does a falling cat usually land on her feet? An OMG moment!

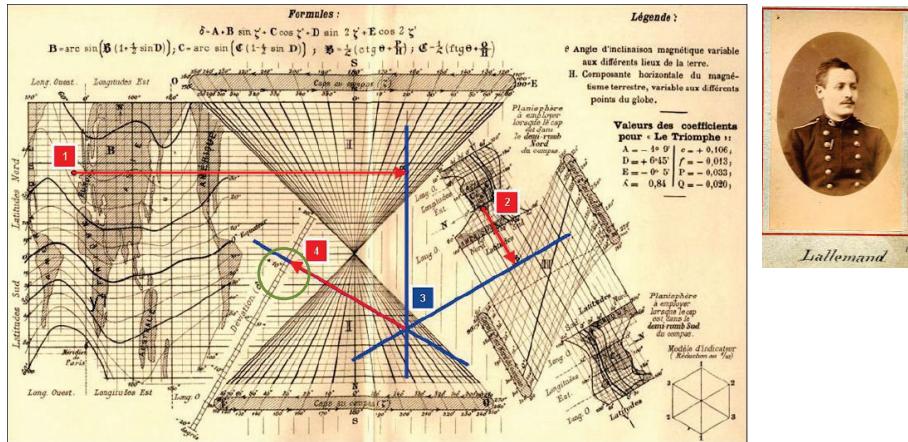

44

Nomography

1885: Charles Lallemand, graphical calculator for compass course corrections of a ship at sea

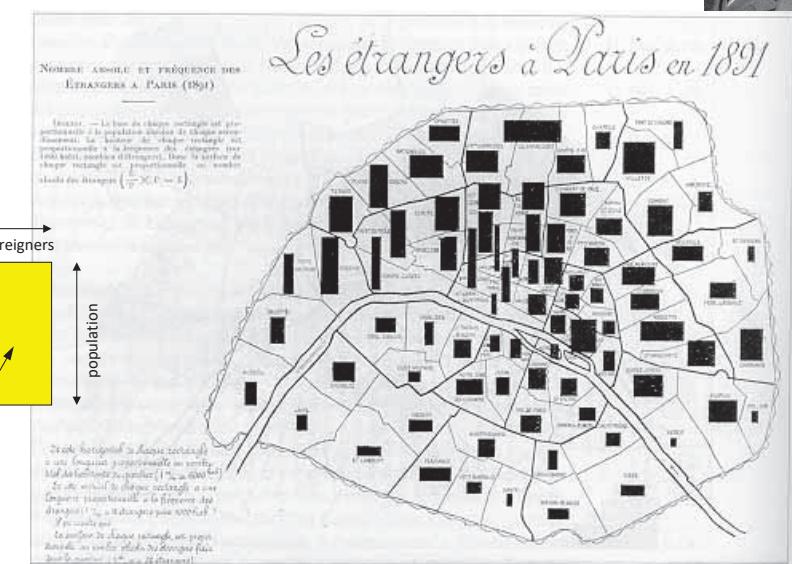

Combines: anamorphic maps, hexagonal coordinates, trigonometric scales (5 eqns)

<https://deadreckonings.files.wordpress.com/2010/05/lallemandhexagonalcharttriangularcoordinates.pdf>

45

1896: Area rectangles on a map to display two variables and their product- Jacques Bertillon

1900-1949: The Modern Dark Ages

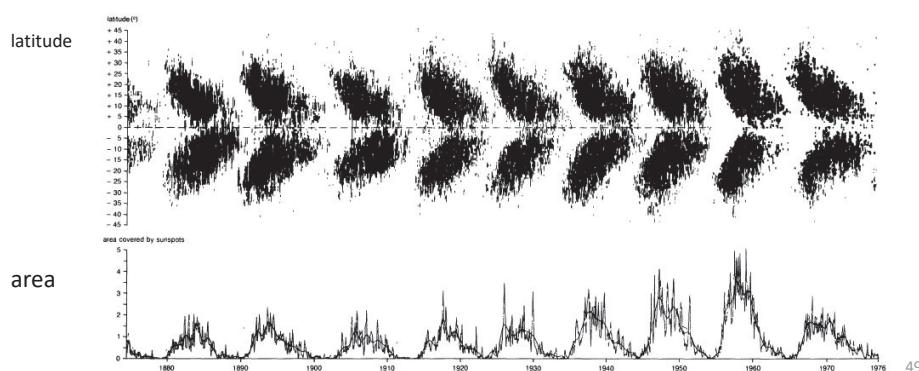

- By the 1930s, the growth of statistical methods supplanted enthusiasm for graphics
 - There were few graphic innovations
 - In statistics: numbers were precise; graphs were just “pretty pictures”
- But graphical methods had entered the mainstream & were popularized
 - Text books, college courses
- There were several graphic-based scientific discoveries
- Electronic computers were born

Maunder: Butterfly diagram

1904: E.W. Maunder plots distribution of sunspots in sun's latitude by time

- Discovery of 11-year sunspot cycles (& 22-yr: reversal of sun's magnetic field)

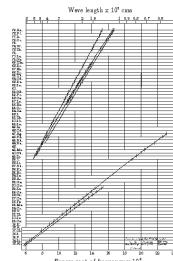

49

1900-1949: The Modern Dark Ages

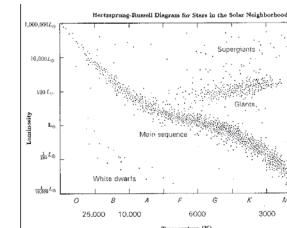

1914: Brinton: *Graphic Methods for Presenting Facts*

1913: Discovery of atomic number, based on graphical analysis- H. Moseley

1911-1913: The Hertzsprung-Russell diagram & evolution of stars

1924: ISOTYPE method of pictorial graphics—Otto Neurath

1944: Harvard's Mark I, the first digital computer- Howard Aiken, Grace Hopper

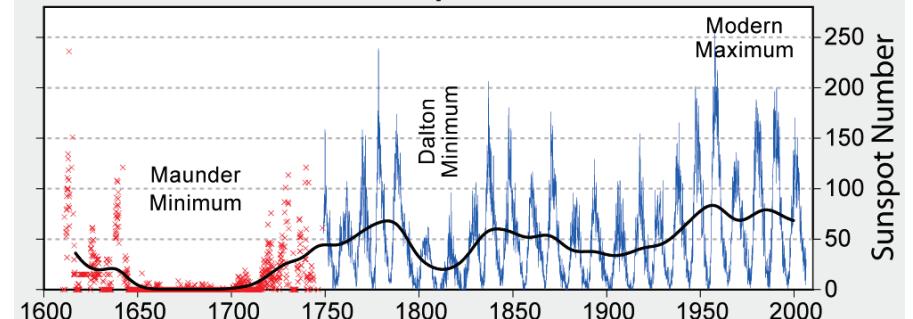

48

Maunder: Butterfly diagram

1904: E.W. Maunder plots distribution of sunspots in sun's latitude by time

- Discovery of “Maunder minimum” (1645-1715): “Little Ice Age”
- Smoothing reveals other extrema

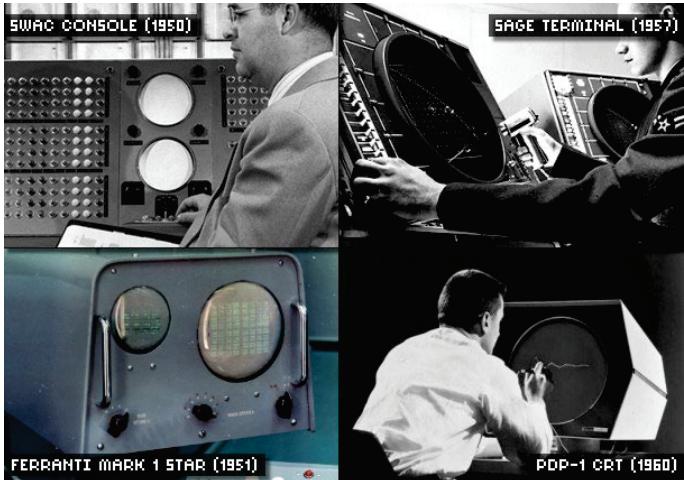

400 Years of Sunspot Observations

50

Digital display devices

The biggest limitation in the early development of dynamic and interactive graphics was in graphics display devices.

Only B/W, but for the first time, **dynamic** displays became possible.

By the late 1950s, pen-like input devices allowed rudimentary direct **interaction**.

55

1975-present

Technology:

- Progressively more powerful computation & graphics
 - Mainframes → PCs → workstations → servers → cloud computing
 - pen plotters → CRTs → graphics hardware & firmware
 - stand-alone → client-server architecture
- Internet
 - email → bitnet -> file sharing (FTP) → www (HTML) → Java → javascript
 - data: open data initiatives (~1995) → APIs (census, health, ...)
 - eCommerce: Amazon, Netflix, ... → BIG data, recommender systems
- Software
 - Graphics packages: SYSTAT, Data Desk, XGobi, ViSta
 - Statistical packages: SAS, SPSS
 - Statistical programming environments: R, matlab, Stata
 - Contributed package archives: CTAN (latex), CPAN (perl), CRAN (R)
 - Collaborative development sites: github, bitbucket, ...

56

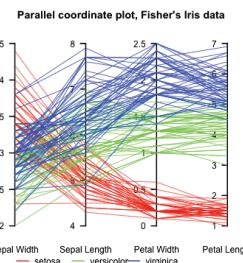

1975-present

Themes in data visualization:

- high-D problems of progressively higher dimensions
 - grand tour: n-D → 2D projections
 - Dimension reduction methods (PCA, MDS, biplots)
- graphics & methods for other data types:
 - categorical, frequency data,
 - networks, trees, ...
 - text (word clouds, ...)
 - spatial data & models
- interactive data vis
 - linked views
 - direct manipulation: select, zoom, filter
 - dynamic graphics & animation

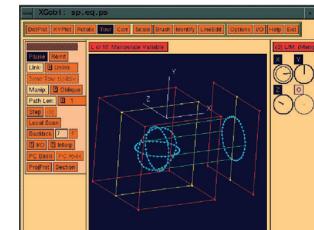

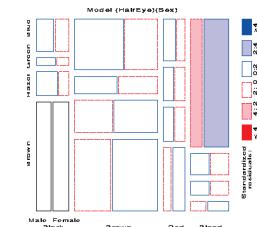

57

1975-present

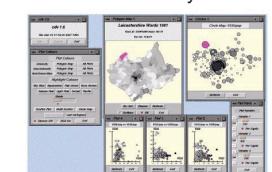

1985: Parallel coordinates plots for high-D data- Alfred Inselberg

1991: Mosaic display for visual analysis of log-linear models- Michael Friendly

1991-1996: High-interaction systems for data analysis and visualization, e.g., XGobi, ViSta

1996: Cartographic Data Visualiser – Jason Dykes

58

Tukey: PRIM-9

1973: a group at the Stanford Linear Accelerator developed PRIM-9

- Picturing, Rotating, Isolation, Masking in up to 9 dimensions
- \$400K graphic display & keypad; computations on a mainframe, \$500/hr

PRIM-9 Movie: <https://www.youtube.com/watch?v=sN2gCCd2Rr8>

59

Next steps: Hardware

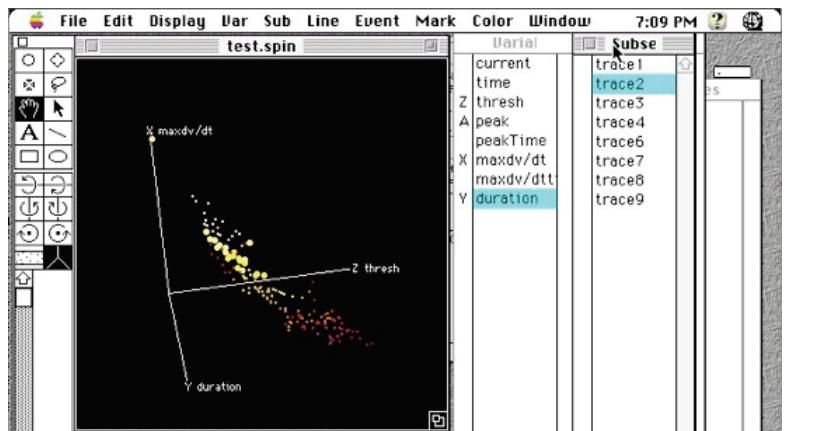

- Dynamic 3D graphics was painfully slow for larger data sets.
- Specialized 3D graphics hardware:
 - Early 1970s: Simple LSI graphics chips for video games
 - 70s—80s: Graphics co-processors (GPUs) with increasing graphics capabilities
 - 80s—90s: Silicon Graphics develops high-performance 3D graphics workstations

60

Software

- MacSpin – Andrew & David Donoho (1984–85). At ASA meetings 1986, “dynamic graphics became as portable as a 25-lb Macintosh”

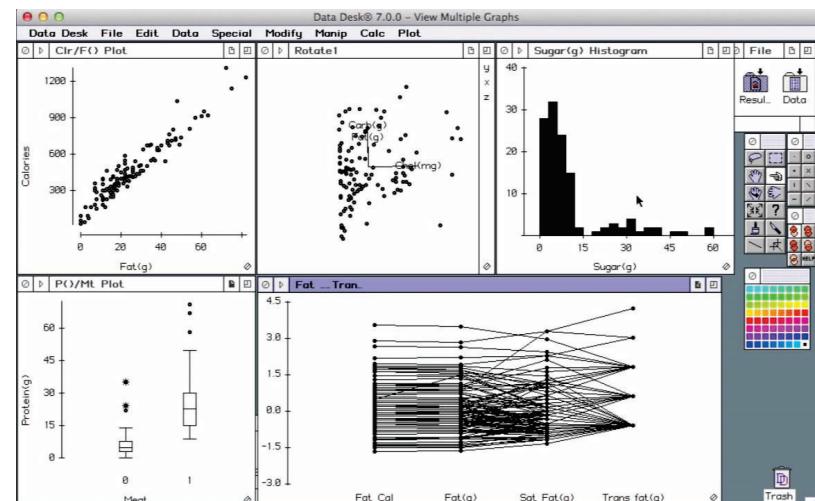

61

Linking, brushing, 3D rotation

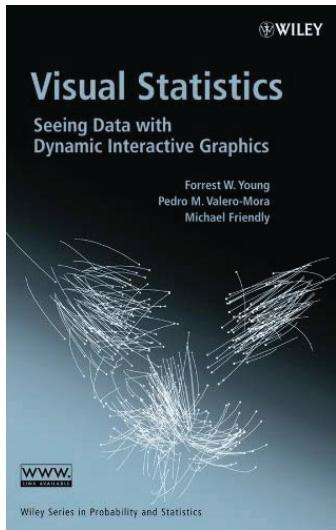

Paul Velleman (~1985): Data Desk provided multiple 1D, 2D, 3D views

- **Brushing:** selection of points, regions, ... via mouse
- **Linking:** Any action in one plot reflected in all others

62

Visual Statistics

Young, Valero-Mora & Friendly (2006)

A philosophy & pedagogy for statistics based on dynamic interactive graphics

A theory of #datavis software:

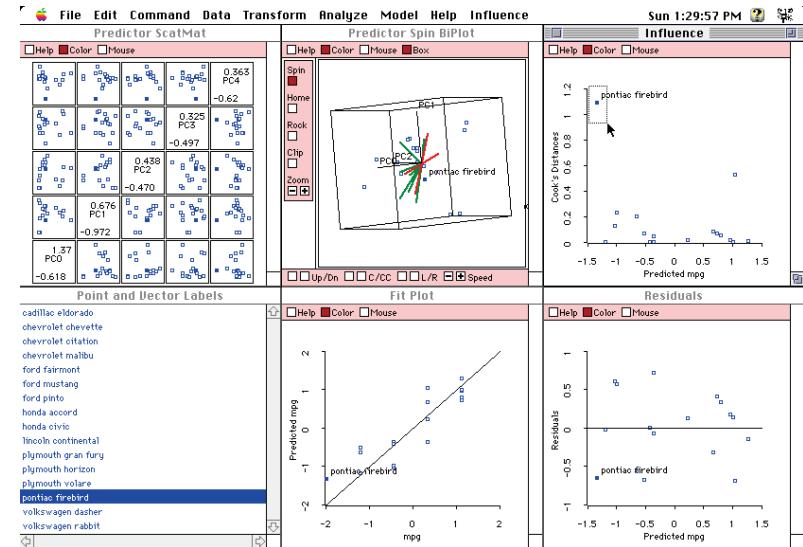

- objects (data, model, ...)
- methods (print, plot,)
- manipulating plot objects & dimensions
- spin plots: rotating 3D plots
- spreadplots: dynamically linked views
- workmaps: visual record of analysis steps

Details: <https://www.uv.es/visualstats/>

See: The History of ViSta: The Visual Statistics System,
<https://onlinelibrary.wiley.com/doi/full/10.1002/wics.1203>

63

ViSta: Visual Statistics

64

Summary

- Data Visualization has deep & wide roots:
 - **Cartography:** map-making, geo-measurement, thematic cartography, GIS, geo-visualization
 - **Statistics:** probability theory, distributions, estimation, models, stat-graphics, stat-visualization
 - **Data:** population, economic, social, moral, medical, ...
 - **Visual thinking:** geometry, functions, mechanical diagrams, EDA, ...
 - **Technology:** printing, lithography, computing...
- **Problem driven:** developments often driven by practical and theoretical problems of the day
- **Communication driven:** developments often arose from a desire to communicate better

65

Conclusions

- Why study the history of data visualization?
 - "The only new thing in the world is the history you don't know" – Harry S. Truman
 - "Those who cannot remember the past are condemned to repeat it." – George Santayana (*The Life of Reason*, 1905)
 - "No scientific discovery is named after its original discoverer" – Stigler's Law of Eponomy (1980). But: originally due to Merton!
- Today:
 - Narrow, specialized work in many fields
 - New methods "invented" and re-named w/o knowing history.
 - mosaic displays: Georg von Mayr (1877)
 - heatmaps: Loua (1873); Brinton (1914), Bertin (1967)
 - Nightingale (1859) rose diagram: polar diagrams by Guerry (1829), Lalanne (1843)

66
