

Psychology of Data Visualization: Course Overview

Michael Friendly

Psych 6135

<https://friendly.github.io/6135>

@datavisFriendly

Introducing: me

I wear two hats, both reflected on my license plate:

Statistical graphics developer (categorical & multivariate data analysis)

Yours to discover!

mosaic plots for frequency tables

HE plots for MANOVA

2

Introducing: me

History of data visualization: *Les Chevaliers*; Friendly & Wainer (2021)

John Snow's map of cholera in London, 1854

original

modern enhancement

C. J. Minard: Flow maps of cotton trade

Visual explanation: What happened in the US Civil War?

3

Course Topics

- Varieties of information visualization
 - Goals of visualization
 - Survey of graphic forms
- History of information visualization
- Psychological models, theories and results
 - What can people see, understand and remember from data displays?
 - Perceptual aspects, cognitive aspects
- Software tools for information visualization (mainly R)
- Visualization in statistics: case studies
 - Categorical data; High-D data; Dynamic and interactive methods
- Human factors research: how to tell what works

4

Your role

- Weekly readings – see the course [web](#) site for updates
- Discussion – no formal grade, but please contribute
- Discussion leader (20%)
 - Each week 1 of you will lead a brief discussion on one of the readings or sub-topics (~ 5-8 min.)
- Class presentation (40%)
 - In the last week, each person will give a ~ 20 min presentation on a topic of research, application or software related to data visualization
- Research proposal (40%)
 - Prepare a brief research proposal on a data visualization topic

5

Books & Readings

Colin Ware, *Information Visualization*, 3rd Ed.

What perceptual science has to say about data visualization, from a bottom-up perspective
Course notes at: <http://ccom.unh.edu/vislab/VisCourse/index.html>

Alberto Cairo, *The Truthful Art*

Information graphics from a communication perspective
Blog: <http://www.thefunctionalart.com/>

Steven Kosslyn, *Elements of Graph Design*

A cognitive psychologist looks at graphs and presents some do's and don'ts. There are better books like this today.

Hadley Wickham, *ggplot2: Elegant graphics for data analysis*, 2nd Ed.

1st Ed: Online, <http://ggplot2.org/book/>

ggplot2 Quick Reference: <http://sape.inf.usi.ch/quick-reference/ggplot2/>

Complete ggplot2 documentation: <http://docs.ggplot2.org/current/>

6

More books I like

Tamara Munzner (2014), *Visualization Analysis & Design*

An attractive new book combining computer science and design perspectives
Web page: <http://www.cs.ubc.ca/~tmm/vadbook/> with lots of illustrations & lectures

Claus Wilke(2019), *Fundamentals of Data Visualization*

A detailed, practically oriented book on data visualization methods
Online: <https://clauswilke.com/dataviz/>
Course notes: <https://wikelab.org/SDS375/>

Manuel Lima, *The Book of Trees: Visualizing branches of knowledge*

A visual delight; an entire history of tree-type diagrams
Blog: <http://www.visualcomplexity.com/vc/blog/>

Keiran Healy, *Data Visualization: A Practical Introduction*

An accessible primer on how to create effective graphics from data using ggplot2
Online: <http://socvis.co>

7

Tufte Stuff

Four books by Edward Tufte largely defined the landscape for data visualization and information design

Concepts introduced:

- chart junk,
- data-ink ratio,
- small multiples,
- substance takes precedence over visual design

Web site:
<http://www.edwardtufte.com>

8

Blogs & Web resources

My web site, <http://datavis.ca>. Contains the [Milestone Project](#) on the history of data vis, [Data Visualization gallery](#), links to books, papers and courses.

Kaiser Fung, <http://junkcharts.typepad.com/>. Fung discusses a variety of data displays and discusses how they can be improved.

visual complexity

Nathan Yau's blog, <http://flowingdata.com>. A large number of blog posts illustrating data visualization methods with tutorials on how to do these with R and other software.

<http://visiphilia.org/>. Statisticians Di Cook and Heike Hofmann from Iowa State University blog about data visualization topics, using R

Manuel Lima's blog, <http://www.visualcomplexity.com/vc/blog/>, with hundreds of projects on all types of visualizations

9

Blogs & Web resources

DATA STORIES

KANTAR
Information is Beautiful
Awards

<http://datastori.es/>. A podcast on data visualization with Enrico Bertini and Moritz Stefaner; interviews with over 100 graphic designers & developers.

Annual awards celebrate excellence and beauty in data visualizations, infographics, interactives & information art.
<https://www.informationisbeautifulawards.com>

<https://www.r-bloggers.com/>. A large collection of posts on R news and tutorials by over 750 R bloggers.

Raymond Andrews, <http://infowetrust.com/>. A visual storyteller delights with graphic stories from the history of data visualization

10

Psychology facts: Why visualization?

- ~90% of information about the environment is received through the eyes.
- ~50% of our brain neurons are involved in the processing of visual information.
- The presence of pictures increases desire to read the text by ~80%.
- We remember 10% of what we heard, 20% of what's read, and 80% of what's seen!
- People perceive 70% of the information if there are no illustrations. Add pictures there — the figure will increase up to 95%.

McLeod, S. A. (2018). Visual perception theory. Simply Psychology. www.simplypsychology.org/perception-theories.html

11

Data, pictures, models & stories

Goal: Tell a credible story about some real data problem

Data, pictures, models & stories

Two paths to enlightenment

Data, pictures, models & stories

Now, tell the story!

Words, numbers and pictures

Pictures and images in a wider context

Words, numbers and pictures

Beauty: The 4th dimension

Modes of communication also vary in **beauty** & aesthetic appeal

Roles of graphics in communication

- Graphs (& tables) are forms of communication:
 - What is the audience?
 - What is the message?

Analysis graphs: design to see patterns, trends, aid the process of data description, interpretation

Presentation graphs: design to attract attention, make a point, illustrate a conclusion

Different graphs for different purposes

19

Infographics

The best infographics tell a story, using numbers, but shown visually

Drowning in plastic

From: <https://graphics.reuters.com/ENVIRONMENT-PLASTIC/0100B275155/index.html>

20

Powerful graphs: Measles and vaccines

Visualizing the impact of health policy interventions

In 2015 Tynan DeBold & Dov Friedman in the *Wall Street Journal* show the effect of the introduction of vaccination programs in the US states on disease incidence, using color-coded heat maps for a variety of diseases

Measles was decimated!

The message hits you between the eyes!

Powerful graphs make comparison easy

In 2014, vaccination rates declined and measles re-emerged in those areas

Effective graphs can cure ignorance, but not stupidity.

Source: <http://graphics.wsj.com/infectious-diseases-and-vaccines/>

21

Police shooting deaths

Analysis of Washington Post database on 5500 police shooting deaths for Blacks vs. Whites

Plotting % of shooting vs.
% of pop shows a clear &
disturbing pattern

Annotations help to tell
the story

From: <https://medium.com/two-n/visualizing-wapos-police-shooting-dataset-3792593f6b>

6

Presentation graph: Nightingale (1857)

The best graphs pass the **Interocular Traumatic Test**: the message hits you between the eyes!

Their names: Interactive graphic

As powerful as Yad Vashem & the Washington D.C. Vietnam memorial, this list of 28,000 US fatal encounters with police commands attention.

Each one is linked to a story or description. Classified by {Gender, Age, Cause}

<https://theirnames.org/>

23

Data graph: Nightingale (1857)

The same, as a data graph, using time-series line plots

Many statisticians might prefer this today, but it doesn't draw attention or interest as Flo's original did. It likely would not have roused British Parliament to act!

25

Racial profiling: Analysis graph

- Toronto Star (2002) study of police actions on a charge of simple possession of marijuana
 - release with a summons (Form 9) vs. hold for bail (Show cause)
 - Evidence for racial bias?
- First graph: mosaic display
 - area ~ frequency
 - shading: ~ residual
 - Obs > Expected in blue
 - Obs < Expected in red

28

Racial profiling: The process

How to communicate these results most effectively?

- What is the message? What features are directly comprehensible to the audience?

Man behind the numbers

29

Racial profiling: Presentation graphic

Together, we created this (nearly) **self-explaining** infographic

30

Why plot your data?

Graphs help us to see

patterns, trends, anomalies and other features

not otherwise easily apparent from numerical summaries.

Source: <http://xkcd.com/523/>

31

Why plot your data?

Three data sets with exactly the same bivariate summary statistics:

- Same correlations, linear regression lines, etc
- Indistinguishable from standard printed output
- Totally different interpretations!

Standard data

$r=0$ but + 2 outliers

Lurking variable?

32

Comparing groups: Analysis vs. Presentation graphs

Six different graphs for comparing groups in a one-way design

- which group means differ?
- equal variability?
- distribution shape?
- what do error bars mean?
- unusual observations?

Never use dynamite plots

Always explain what error bars mean

Consider tradeoff between
summarization & exposure

33

Presentation: Turning tables into graphs

Variable	Coefficient (Standard Error)
Constant	.41 (.93)
Countries	
Argentina	1.31 (.33) *** B.M
Chile	.93 (.32) *** B.M
Colombia	1.44 (.32) *** B.M
Mexico	.07 (.32) .CH.CO.V
Venezuela	.96 (.37) ** B.M
Threat	
Retrospective egocentric economic perceptions	.20 (.13)
Prospective egocentric economic perceptions	.22 (.12)*
Retrospective sociotropic economic perceptions	-.21 (.12)*
Prospective sociotropic economic perceptions	-.32 (.12)**
Ideological Distance from president	
Ideology	
Ideology	.23 (.07) ***
Individual Differences	
Age	.00 (.01)
Female	-.03 (.21)
Education	.13 (.14)
Academic Sector	.15 (.29)
Business Sector	.31 (.25)
Government Sector	-.10 (.27)
R ²	.35
Adjusted R ²	.32
n	500

***p < .01, **p < .05, *p < .10 (two-tailed)

A Coefficient is significantly different from Argentina's at p < .05;

B Coefficient is significantly different from Brazil's at p < .05;

CH Coefficient is significantly different from Chile's at p < .05;

CO Coefficient is significantly different from Colombia's at p < .05;

M Coefficient is significantly different from Mexico's at p < .05;

V Coefficient is significantly different from Venezuela's at p < .05

Graphs of model coefficients are often clearer than tables

Source: tables2graphs.com

34

Graphs & Information design

- Graphs & info displays should be viewed in relation to communication goals & audience
- Some criteria for assessing:
 - **comprehensibility:** does it make information as easy to understand as possible?
 - **attention:** does the audience take notice?
 - **aesthetics:** is it visually appealing?
 - **memorability:** will they remember it?
 - **behavior:** does it result in some desired action?

From: Ben Jones, To Optimize or to Satisfice in Data Visualization? <https://dataremixed.com/2016/01/optimize-or-satisfice-in-dataviz/>

35

Effective data display

- Make the data stand out
 - Fill the data region (axes, ranges)
 - Use visually distinct symbols (shape, color) for different groups
 - Avoid chart junk, heavy grid lines that detract from the data
- Facilitate comparison
 - Emphasize the important comparisons visually
 - Side-by-side easier than in separate panels
 - “data” vs. a “standard” easier against a horizontal line
 - Show uncertainty where possible
- Effect ordering
 - For variables and unordered factors, arrange them according to the **effects** to be seen

36

Comparisons— Make visual comparisons easy

- Visual grouping— connect with lines, make key comparisons contiguous
- Baselines— compare *data* to *model* against a line, preferably horizontal
- Frequencies often better plotted on a square-root scale

Standard histogram with fit

Suspended rootogram

37

Make comparisons *direct*

- Use points not bars
- Connect similar by lines
- Same panel rather than different panels

Is there evidence of an interaction here?

Published in Ian Gordon, Sue Finch; *Journal of Computational and Graphical Statistics* 2015, 24, 1210-1229.
DOI: 10.1080/10618600.2014.989324
Copyright © 2015 American Statistical Association, Institute of Mathematical Statistics, and Interface Foundation of North America

38

Direct labels vs. legends

Direct labels for points, lines and regions are usually easier and faster than legends

- Give the names of the four groups shown in the line graph at left in top-to-bottom order.
(Answer: b, d, a, c.)
- Now do so for the graphs using color or shape legends
- You need to look back and forth between the graph and legend

Source: Franconeri et al. DOI:
[10.1177/15291006211051956](https://doi.org/10.1177/15291006211051956)

39

Showing uncertainty

- Standard plots of observed vs. predicted lack a basis for assessment of uncertainty
- Confidence envelopes indicate extent of deviation
- Identify “noteworthy” observations to track them down

Example: Normal QQ plots used to assess normality of data

41

Effect order failure: the *Challenger* disaster

- Few events in history provide as compelling illustration of importance of appropriate ordering and display of information
 - On January 28, 1986, the space shuttle Challenger exploded on take-off.
 - The cause was later determined to be that rubber O-rings failed due to cold weather
- Tables and charts presented to NASA by Thiokol engineers showed data from prior launches ordered by **time** (launch number), rather than by **temperature**—the crucial factor.
- The engineers’ charts were also remarkable for information obfuscation: “erosion depth” (O-ring damage), “blow-by” (soot on O-rings), ...

Launch No.	Cross Sectional View	Top View		Clocking Location (deg)
		Tension Depth (in.)	Affected Area (deg)	
STS-7	None	None	0.280	None
EIA LH Center Field**	None	None	0.280	None
SIC LH Forward Field*	None	0.280	4.25	130
SIC LH Center Field	None	0.280	12.50	130
SIC LH Center Field (pri)***	139.0	0.280	58.75	354
SIC LH Center Field (sec)***	158	0.280	23.50	354
41B RH Forward Field	None	None	0.280	None
41B LH Aft Field*	None	0.280	3.00	275
41B LH Forward Field	None	0.280	14.50	354
STS-2 RH Aft Field	28	0.253	116.0	0.280

42

Effect ordering

- Information presentation is always **ordered**
 - in **time** or sequence (a talk or written paper)
 - in **space** (table or graph)
 - Constraints of time & space are dominant— can conceal or reveal the important message
- Effect ordering for data display
 - Sort the data by the **effects to be seen**
 - Order the data to **facilitate the task at hand**
 - lookup – find a value
 - comparison – which is greater?
 - detection – find patterns, trends, anomalies

Visual explanation: Physics

- NASA appointed members of the Rogers Commission to investigate the cause of the disaster
- the noted physicist Richard Feynman discovered the cause: at low temperature, O-rings became brittle and were subject to failure
- in his testimony, he demonstrated the effect by plunging a rubber O-ring into a cup of ice water

43

Visual explanation: Graphics

- Subsequent statistical analysis showed the relationship between launch temperature and O-ring failures
- As Tufte (1997) notes: the fatal flaw was in the **ordering** of the data.

The graph shown here is the result of a statistical model fit to the data

- The **thick** line shows the predicted value of failure vs. temperature
- The **red** dotted lines show uncertainty of the predicted values

44

Presentation graphic

A presentation version of the previous graph alters the scales and describes the story in text annotations

45

Graphic displays: Main effect ordering

- To see trends, patterns, anomalies: **Sort unordered factors by means or medians**

Data on barley yields
10 varieties x 6 sites x 2 years

3-way dot plot, sorted by main effect means

- Which site has the highest yield?
- Which variety is highest on average?
- Which site stands out in pattern over year?

46

Tabular displays: Main effect ordering

- Tables are often presented with rows/cols ordered **alphabetically**
 - good for lookup
 - bad for seeing patterns, trends, anomalies

Table 1: Average Barley Yields (rounded), Means by Site and Variety

Variety	Site						Mean
	Crookston	Duluth	Grand Rapids	Morris	University Farm	Waseca	
Glabron	32	28	22	32	40	46	33.3
Manchuria	36	26	28	31	27	41	31.5
No. 457	40	28	26	36	35	50	35.8
No. 462	40	25	22	39	31	55	35.4
No. 475	38	30	17	33	27	44	31.8
Peatland	33	32	31	37	30	42	34.2
Svansota	31	24	23	30	31	43	30.4
Trebi	44	32	25	45	33	57	39.4
Velvet	37	24	28	32	33	44	33.1
Wisconsin No. 38	43	30	28	38	39	58	39.4
Mean	37.4	28.0	24.9	35.4	32.7	48.1	34.4

47

Tabular displays: Main effect ordering

- Better: sort rows/cols by means/medians
- Shade cells according to residual from additive model

Table 2: Average Barley Yields, sorted by Mean, shaded by residual from the model Yield = Variety + Site

Variety	Site					Mean	
	Grand Rapids	Duluth	University Farm	Morris	Crookston		
Svansota	23	24	31	30	31	43	30.4
Manchuria	28	26	27	31	36	41	31.5
No. 475	17	30	27	33	38	44	31.8
Velvet	28	24	33	32	37	44	33.1
Glabron	22	28	40	32	32	46	33.3
Peatland	31	32	30	37	33	42	34.2
No. 462	22	25	31	39	40	55	35.4
No. 457	26	28	35	36	40	50	35.8
Wisconsin No. 38	28	30	39	38	43	58	39.4
Trebi	25	32	33	45	44	57	39.4
Mean	24.9	28.0	32.7	35.4	37.4	48.1	34.4

48

Tabular displays: Main effect ordering

Yield difference, $\Delta y_{ij} = 1931 - 1932$ by Variety & Site

Ordered: by row and column means; shaded: by value ($|\Delta y_{ij}| > \{2,3\} \times \sigma(\Delta y_{ij})$)

What features stand out?

Table 3: Yield Differences, 1931-1932, sorted by mean difference, and shaded by value

Variety	Site						Mean
	Morris	Duluth	University Farm	Grand Rapids	Waseca	Crookston	
No. 475	-22	6	-5	4	6	12	0.1
Wisconsin No. 38	-18	2	1	14	1	14	2.4
Velvet	-13	4	13	-9	13	9	2.9
Peatland	-13	1	5	8	13	16	4.8
Manchuria	-7	6	0	11	15	7	5.5
Trebi	-3	3	7	9	15	5	6.1
Svansota	-9	3	8	13	9	20	7.3
No. 462	-17	6	11	5	21	18	7.4
Glabron	-6	4	6	15	17	12	8.0
No. 457	-15	11	17	13	16	11	8.8
Mean	-12.2	4.6	6.3	8.2	12.5	12.5	5.3

49

Graphical display: Two-way tables

Tukey two-way plot of average barley yield

If there is no interaction,
 $y_{ij} = \mu + \alpha_{site} + \beta_{variety}$

Site & variety effects sorted automatically
 Effects are spaced by fitted values

More variation among sites than varieties
 Waseca best, by a wide margin

50

Multivariate data: correlation ordering

- Arrange **variables** so that:
 - Similar variables are contiguous
 - Ordered to show patterns of relations
- Arrange **observations** so that:
 - Similar variables are contiguous
 - Ordered to show patterns of relations

51

Correlation matrices

Baseball data: Batting, fielding and (log) Salary

Nobody wants to see all those decimals

	Assists	Atbat	Errors	Hits	Homer	logSal	Putouts	RBI	Runs	Walks	Years

52

Baseball data

This is a corrgram display of the correlations among the baseball statistics, with the variables ordered alphabetically

54

Correlation ordering: corrgrams

Rendering: a correlation value can be displayed in different ways, for different tasks

Friendly (2002), *Corrgrams: Exploratory displays for correlation matrices*, American Statistician.

53

Baseball data

The same display, with the variables sorted according to the angles between vectors in the PCA

Not that dramatic, but it isolates the positive & negative correlations

55

Graphs: Good/Bad, Excellent/Evil

- Like good writing, good graphical displays of data communicate ideas with:
 - clarity,
 - precision, and
 - efficiency— avoids graphic clutter
 - Even better: excellent graphs make the message obvious
- Like poor writing, bad graphical displays:
 - distort or obscure the data,
 - make it harder to understand or compare, or
 - thwart the communicative effect the graph should convey.
 - Even worse: evil graphs distort, or mislead.

56

Bad graphs are easy in Excel

Friends don't let friends use Excel for data visualization or statistics

How many things are wrong with this graph?

57

Pie charts are easy to abuse

What's wrong with these pictures?

$$1\pi = 193\%$$

$$1\pi = 178\%$$

Why do graphic designers so often get this wrong?

58

Pie chart merriment

On the other hand, pie charts are a great source of merriment for people interested in graphics

But: how much π have I eaten?

What perceptual ideas make this a great joke and lesson?

hard to see the pyramid, it's

Once you see the pyramid, it's

59

But, can be used to great effect

This graphic uses pie charts to show the transport of different kinds of goods to the ports of Paris and the principal maritime ports

- the size of each pie reflects **total**
- the sectors reflect **relative %**
- location places them in **context**

Album de Statistique Graphique, 1885, plate 17.

60

Simple re-design makes it clearer

Total Deaths in America by Cause in 2007

62

3D pie charts are usually evil

What was the intent of the designer of this graphic?
Which category led to the greatest total deaths?
What was the proportion of deaths due to strokes?
Did more people die from strokes vs. accidents?

61

Or, try to use direct labels

Total Deaths in American by Cause in 2007

As a rule of thumb, pie charts max out at ~ 5-7 sectors

63

Double Y-axis: Really evil graphs

After pie charts, double Y-axis graphs have caused more trouble than almost any other

OMG, autism has been increasing directly with sales of organic food!

BAN
ORGANIC
FOOD!

64

Or, another graph would have been better

A modern re-vision plots the ratio of price of wheat to wages directly
Makes Playfair's point more directly, but less beautifully

66

But, can be used to great effect

William Playfair invented the pie chart, line chart and bar chart.

In this figure, he shows 3 parallel time series over a 250-year period, 1560--1810

- weekly wages of a good mechanic
- price of wheat
- reigning monarch

Goal: show that workers were better off most recently (1810) than in the past

65

Even more evil: No scales, no data

Rep. Jason Chaffetz, R-Utah, sparred with Planned Parenthood president Cecile Richards during a high-profile hearing on Sept. 29, 2015 and presented this graph.

"In pink, that's the reduction in the breast exams, and the red is the increase in the abortions. That's what's going on in your organization."

Created by an anti-abortion group it is a deliberate attempt to mislead.

Can you see why?

PLANNED PARENTHOOD FEDERATION OF AMERICA:
ABORTIONS UP — LIFE-SAVING PROCEDURES DOWN

See: <http://www.politifact.com/truth-o-meter/statements/2015/oct/01/jason-chaffetz/chart-shown-planned-parenthood-hearing-misleading/>

67

Corrected graph

This graph shows the actual data from the Planned Parenthood reports used by Americans United for Life

The number of abortions was relatively steady.

Some services like pap smears, dropped due to changing medical standards about who should be screened and how often.

What are a few improvements that could be made to this graph?

68

Corrected graph, in context

Showing a wider range of PP activities puts these data in context

PP activities were far higher for contraception and STD testing

69

Evil Bars

You can say anything you want if you don't show a scale for the vertical axis

Q: Do people judge the difference in heights or the ratio of heights?

A: It depends on the question

You can greatly distort the perception of difference or ratio by truncating the Y axis.

Y-axis truncation is/was the default in Excel!

70

More evil:
3D bars

- CBC found it irresistible to make 3D bars to show the 2015 election projection.
- Why do you think the smallest 5 bars are all the same height?

71

Graphical Excellence: Tables

A study by Abigail Friendly (2017) wanted to show the use of benefits afforded to Toronto developers for their contributions of different types over time

Figure 9: Section 37 benefits by type (1998–2015)

Source: Friendly, A. R. (2017). *Land Value Capture and Social Benefits: Toronto and São Paulo Compared*. IMFG Papers on Municipal Finance and Governance, No 33, University of Toronto, <https://munkschool.utoronto.ca/imfg/>

72

Graphical failure

This graph reports the results of a survey by Sherman Kent for the CIA with the question:

What [probability/number] would you assign to the phrase "[phrase]"

The goal was to contribute to an understanding of how intelligence analysts use these terms

Why can this be considered a graphical failure?

Figure 18: Measuring Perceptions of Uncertainty

<https://www.cia.gov/library/center-for-the-study-of-intelligence/csi-publications/books-and-monographs/psychology-of-intelligence-analysis/fig18.gif/image.gif>

73

Graphical excellence

This graph shows the same data, as both dotplots & boxplots

We can see a lot more:

- “about even” has very low variability
- the last 3 categories are listed out of order
- the extreme outliers stand out
- skewness is – for high probability, + for low probability

Technical notes:

- software: ggplot2
- design: faint grid lines
- color: points use transparent color & jittering; outliers also shown in black

From: <https://github.com/zonation/perceptions>

74

Graphical excellence

This graph uses “ridgeline” plots to show the same data

Each one is a small version of a density plot showing a smoothed version of the distribution

Stacking them in this way allows center, variability, shape and other features to be readily compared.

Color & transparency are used effectively

75

Chart junk or effective info vis?

Charts can be offensive and/or effective

What is the message?
Who is the audience?

NB: Info designers now consider the term "chart junk" itself offensive

76

Chart junk or effective info vis?

Suzana Herculano-Houzel has a new method for determining counts of cortical neurons across different species. How to present this effectively?

Goal: compare mammal species brain size and cortical neuron count

Neuron count is shown both as numbers and bars

Claim: Human brain is ~ linear of primate brains

What do you think?

How could this be made better?

BRAIN SIZE AND NEURON COUNT

Cerebral cortex mass and neuron count for various mammals.

From: Herculano-Houzel, "The human brain in numbers: a linearly scaled-up primate brain "
<https://www.frontiersin.org/articles/10.3389/neuro.09.031.2009/full>

77

As a scatterplot?

A scatterplot makes clear how humans differ from other species

- Using scaled images as point symbols also conveys brain size
- Primates** are distinguished from **non-primates** by text color

This is arguably a more effective display.

What do you think?

78

As a scatterplot – log scale

Perhaps even better is to make the plot using log scales for both axes

The relationship is now easier to see, but only approx. linear

The argument for neurons ~ brain weight needs more work.

79

Why graphs matter: Climate change

In the movie, *An Inconvenient Truth* (2006), Al Gore used the now-famous “hockey stick” graph to show that human activities had greatly increased the degree of global warming over the recent past

The goal was to raise public awareness and call for action to curb environmental effects: CO₂ emissions as the main agent.

Movie: <https://www.youtube.com/watch?v=8ZUoYGA15i0>; <http://www.imdb.com/title/tt0497116/>

80

Climate change: Original graph

Sir John Houghton presents the original Northern Hemisphere hockey stick graph to the [Intergovernmental Panel on Climate Change](#) (IPCC) in 2005.

It is based on an analysis by Mann, Bradley & Hughes (1990), with a smoothed curve and uncertainty intervals.

81

Climate change: data sources

The MBH (1999) paper had used a wide variety of data sources. They were combined using a novel statistical technique, the first eigenvector-based climate field reconstruction (CFR).

Climate scientists understood this; the sceptics did not.

TOO MUCH INFO??

See: https://en.wikipedia.org/wiki/Hockey_stick_controversy for details

82

Countering climate change

Taking a longer view, and adding a lot of extraneous historical details, climate sceptics were easily able to mount alternative explanations: Solar irradiation & volcanoes

How to mislead:

- Show no temp. scale
- Draw smoothed curve
- Suggest that all is due to “swings” in temp.
- Compress recent history into the end of the time scale

83

Time scale

Perhaps one fault with the original graphs was trying to show noisy data, from many sources, over too wide a time span.

What could you do to make this graph even more convincing?

- Add an overall smooth curve
- De-emphasize the annual data

84

Climate change: Infographic

A politically-incorrect graphic shows very clearly the effect of global warming on panty size

Source: <http://www.politically-incorrect-humor.com/2010/03/positive-proof-of-global-warming>

85

Climate change: other explanations

This infographic attempts to relate global warming to the decrease in pirates

Aside from the substance, how many things are wrong about this graphic?

Simple explanation:
Lack of pirates causes
global warming!

Conclusion:
To stop global warming,
become a pirate!

Source: <http://www.forbes.com/sites/erikaandersen/2012/03/23/true-fact-the-lack-of-pirates-is-causing-global-warming>

86

Circle graphs

What features makes this graph effective?

88

Animation

Shifting Distribution of Land Temperature Anomalies, 1951-2020

<https://svs.gsfc.nasa.gov/4891>

89

Animation -> Ridgeline plot

A ridgeline plot (stacking traces) turns the animation into a static graph

<https://svs.gsfc.nasa.gov/4891>

90

Some graphic rules

- Bars
 - Don't cut off their feet
 - Don't add dynamite fuses
- Pies
 - Generally, best preserved for dessert
 - Well used for part-whole relations with a small number of categories
 - Better used as a graphic form in larger displays
- Axes
 - Avoid double Y-axes
 - Don't truncate without considerable thought
- 3D
 - Avoid for useless "glitz"

92

Summary

- Graphs as a form of communication
 - Data (numbers), words, images → Stories
 - Goal: tell a story
- Analysis graphs vs. presentation graphs
 - Know your audience
- Some principles of effective data display
 - Make the data stand out
 - Facilitate comparisons
 - Effect ordering
 - Direct labeling

93
