

# History of Data Visualization

Michael Friendly  
Psych 6135

<https://friendly.github.io/6135>

?

## Orienting questions

History in context

What motivated graphical inventions?

What was the communication goal?

How does it relate to other developments?  
• What were the pre-cursors?

How has this idea been used or re-invented today?

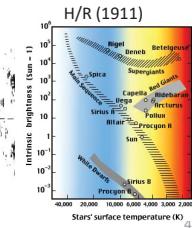

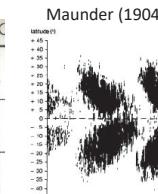

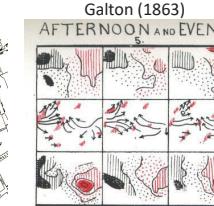

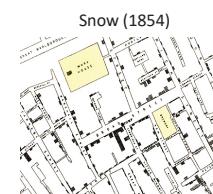

## Outline

- Overview:
  - Roles of graphics in scientific discovery
  - Visualizing history: The *Milestones Project*
- Milestones tour of the history of data vis
  - Pre-history of visualization
  - The first statistical graph
  - The Big Bang: William Playfair
  - Influence of data, technology & visual thinking
- Other topics (later):
  - Moral statistics: the birth of social science
  - Graphs in the public interest: Nightingale, Farr and Snow
  - The Golden Age of statistical graphics

2

## Orienting Q: Visualization-based discoveries ??

- When have graphics led to discoveries that might not have been achieved otherwise?
  - Snow (1854): cholera as a water-borne disease
  - Galton (1883): anti-cyclonic weather patterns
  - E.W. Maunder (1904): 11-year sunspot cycle
  - Hertzsprung/Russell (1911): spectral classes of stars

3

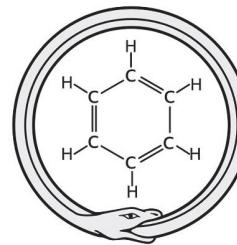

# Orienting Q: Visualization-based discoveries ??

- In the history of graphs, what features, and data led to such discoveries?
  - What were they thinking??
  - What visual ideas/representations were available?
  - What was needed to see/understand something new?
- As we go forward, are there any lessons?
  - What are the Big Questions for today?
  - How can data visualization help?

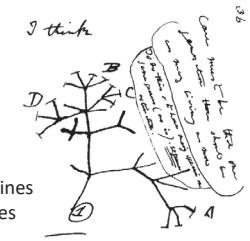

5

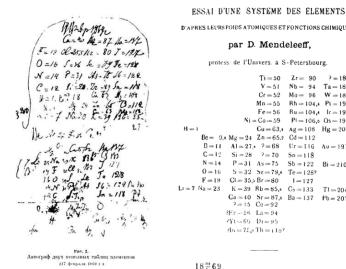

## Visual thinking & scientific discovery

Dreams and snakes  
August Kekulé (1862)  
discovers the structure of  
benzene in a dream

Tree of evolution  
Darwin (1859) imagines  
generations of species

ESSAI D'UN SYSTEME DES ELEMENTS

### Solitaire and the periodic table

Mendeleev (1869) organized chemical elements after a mental image of cards on a table.

See: <https://medium.com/@michael.friendly/visual-thinking-graphic-discoveries-128468677592>

6

## How to visualize travel? A route map!

In 1675, chartmaker John Ogilby told a graphic story of what you would see on a travel from London to Land's End

What was he thinking?

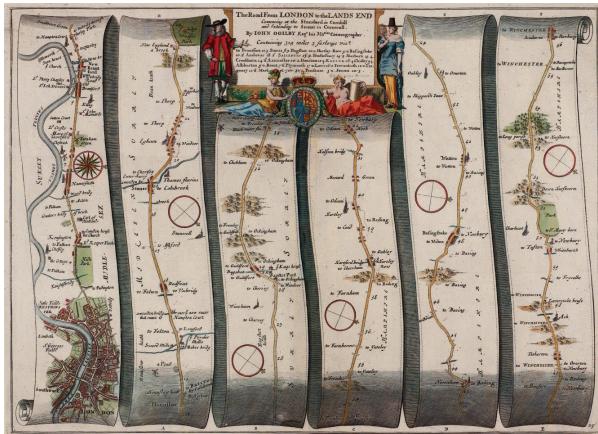

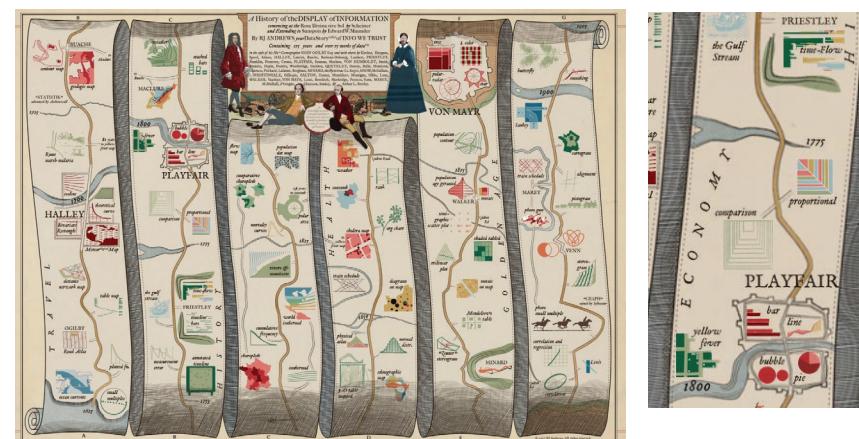

Image: [https://commons.wikimedia.org/wiki/File:Ogilby\\_-\\_The\\_Road\\_From\\_LONDON\\_to\\_the\\_LANDS-END\\_\(1675\).jpg](https://commons.wikimedia.org/wiki/File:Ogilby_-_The_Road_From_LONDON_to_the_LANDS-END_(1675).jpg)

7

## How to visualize history? A route map!

In 2017, graphic storyteller RJ Andrews adopted Ogilby's form to show the history of data visualization.

The online version, <https://history.infowetrust.com/>, is fully interactive, with details about the images on this journey.

8

# The Milestones Project

## Milestones in the History of Thematic Cartography, Statistical Graphics, and Data Visualization

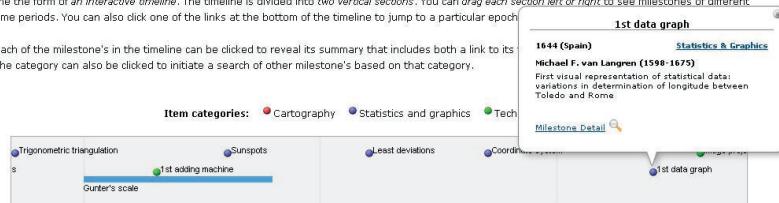

An illustrated chronology of innovations by Michael Friendly and Daniel J. Denis

### Timeline

This page provides a graphic overview of the events in the history of data visualization that we call "milestones." These milestones are shown below in the form of an *interactive timeline*. The timeline is divided into two vertical sections. You can drag each section left or right to see milestones of different time periods. You can also click one of the links at the bottom of the timeline to jump to a particular epoch.

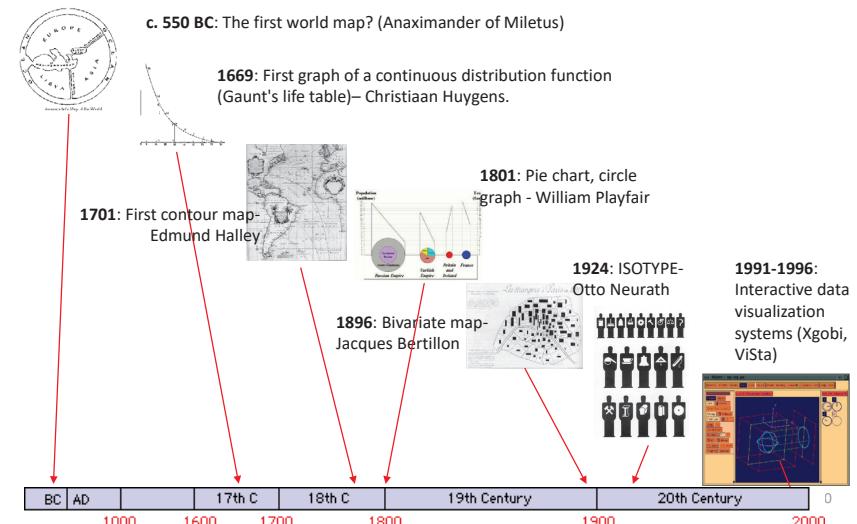

Each of the milestone's in the timeline can be clicked to reveal its summary that includes both a link to its category and also a search of other milestone's based on that category.

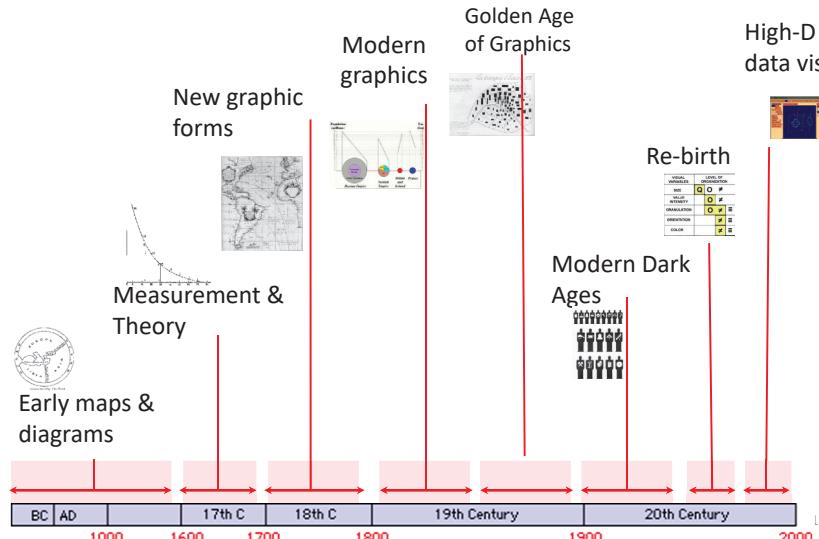

The web site: <http://datavis.ca/milestones> has an interactive timeline, allowing different kinds of search

# Milestones: Content Overview

*Every picture has a story* – Rod Stewart

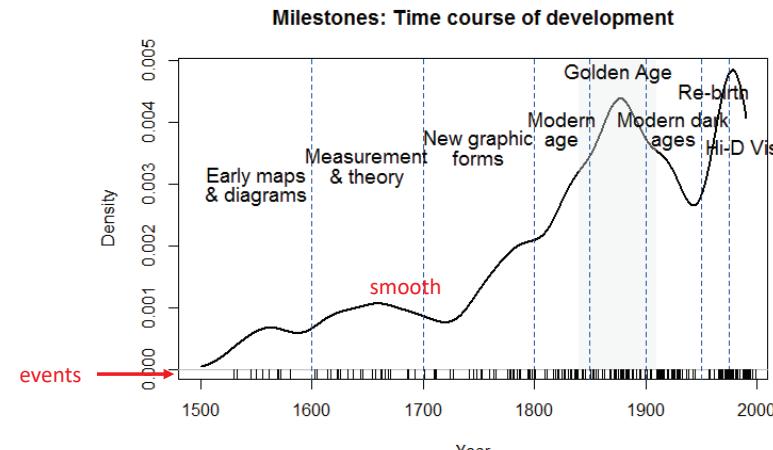

## Milestones Tour: Epochs

## Statistical historiography

Historical information, suitably organized can be treated as data, and analyzed. This plot shows a smoothed frequency distribution of 248 milestones items over time, in relation to the named time periods.

## Prehistory of visualization

Lascaux Cave, ~ 15000 BCE, the “Sistine Chapel of pre-historic art”

Lascaux II, Main chamber 13

## Lascaux: What were they thinking?

Lascaux II, Chamber of the Bulls

- Visual features:
  - show perspective, a sense of motion, rich use of color & texture
- What was the purpose?
  - Hunting success? NO (they hunted reindeer)
  - mostly symbolic – visual language, story of communal myths
- How to understand them?
  - A **cognitive revolution**: evidence for the modern human mind in Cro Magnon man
  - inner vision, visual thinking, mental imagery– a gleam in the mind's eye
- Other cave art [20000BC – 10000BC]: Altamira (Spain); Chauvet (France), Cueva de las Manos (Argentina), ...

14

## Prehistory: Diagrams, graphic stories

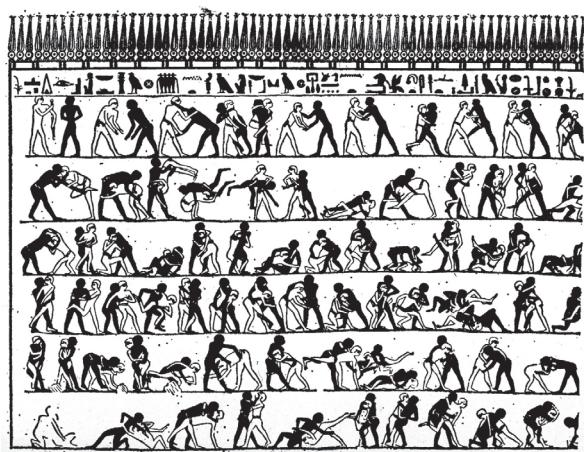

Early Egyptian animated graphic diagram

Wrestling scene on east wall, tomb of Baqt at Beni Hasan (ca. 2000 BCE).

A **visual explanation** of a wrestling match

Anticipates modern graphic novels

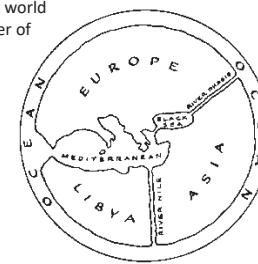

Why? Perhaps Baqt's last lesson as a wrestler in his youth and later as a coach

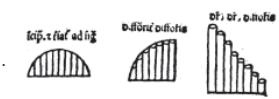

15

## Pre 17<sup>th</sup> C.: Early maps & diagrams

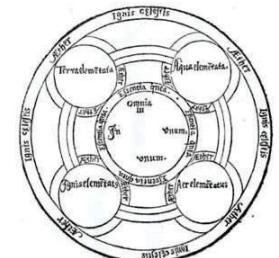

c. 550 BC: The first world map? (Anaximander of Miletus)

1350: Bar graph of theoretical function N. Oresme, France

1305: Mechanical diagram of knowledge- Ramon Llull, Spain

1375: Catalan Atlas, an exquisitely beautiful visual cosmography, perpetual calendar, and thematic representation of the known world- Abraham Cresques, Spain

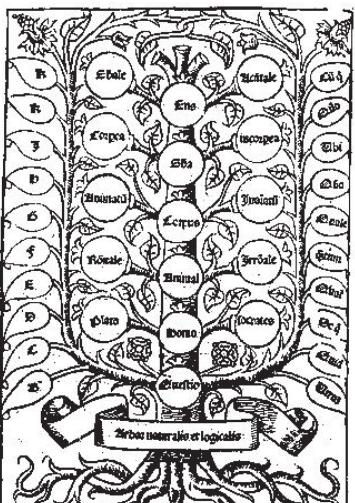

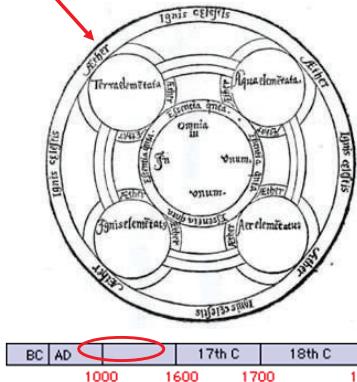

BC AD 1000 17th C 18th C 19th Century 20th Century 2000 16

1305: Mechanical diagram of knowledge- Ramon Llull, Spain

*Ars Magna* → inspiration for symbolic logic

*Tree of porphyry*: Aristotle's categories of knowledge (center)

- Left: questions
  - Right: rotating disks → answers

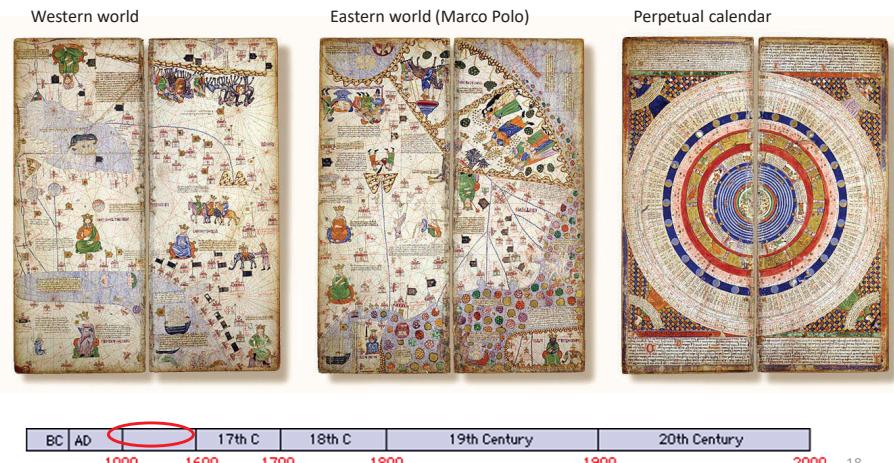

BC	AD	17th C	18th C	19th Century	20th Century
1000	1600	1700	1800	1900	2000

1600-1699: Measurement and Theory

- The 17<sup>th</sup> century saw growth in theory and the dawn of attempts at visualization.
  - Featured in this were:
    - the rise of **analytic geometry**: (x, y) coordinates (Descartes),
    - theories of **errors of measurement**: astronomical observations (Laplace)
    - the birth of **probability theory**-- games of chance, annuities (Fermat, DeMoivre, ...),
    - automatic **graphic recording** (Scheiner)
    - the first graphical representations of **statistical** data (van Langren)

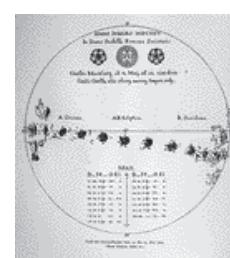

**1375:** Catalan Atlas, an exquisitely beautiful visual cosmography, perpetual calendar, and thematic representation of the known world- Abraham Cresques, Majorca, Spain [BNF: ESP 30]

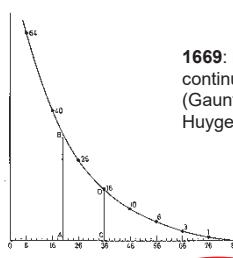

19

## 1600-1699: Measurement and Theory

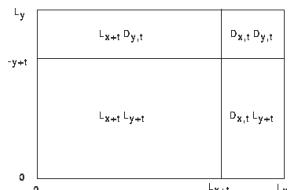

**1626:** Visual representations used to chart the changes in sunspots over time- Christopher Scheiner

## 1644: First visual representation of statistical data - M F van Langren, Spain

**1669:** First graph of a continuous distribution function (Gaunt's life table)– Christiaan Huygens.

**1693:** First use of areas of rectangles to display probabilities of independent binary events- Edmund Hallev. England

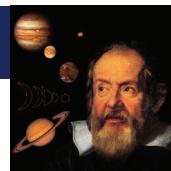

BC	AD	17th C	18th C	19th Century	20th Century
1000	1600	1700	1800	1900	2000

## Sunspots: Galileo

1608: telescope (Hans Lippershey, NL)

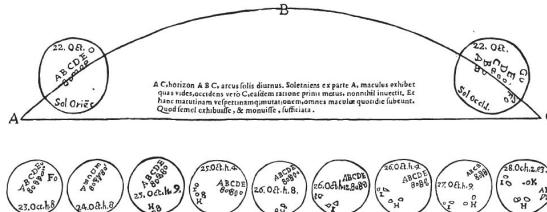

1610: Galileo (*Sidereus Nuncius*)

1611: Galileo records **movement** of sunspots over time (*Three letters on sunspots*, 1613)

### Visual ideas:

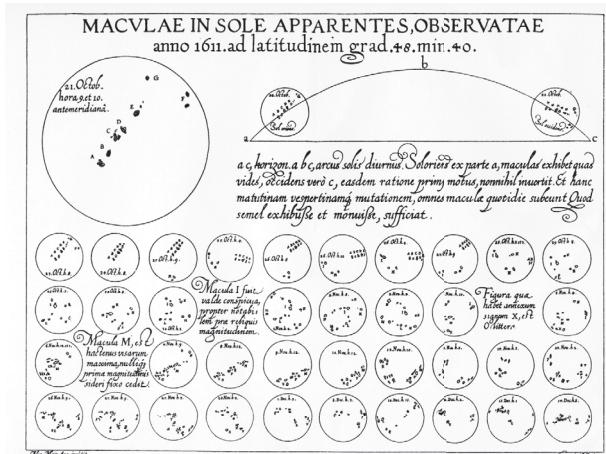

- Animated graphic
- "Small multiples"
- Allows comparison
- Self-explaining diagram

A+ for info design!

21

## Sunspots: Great graph, wrong theory

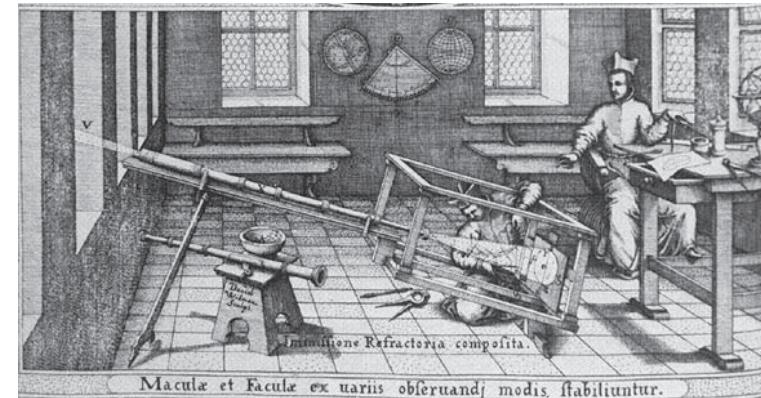

BC	AD	17th C	18th C	19th Century	20th Century	2000
1000	1600	1700	1800	1900	2000	

23

## Scheiner: systematic recording

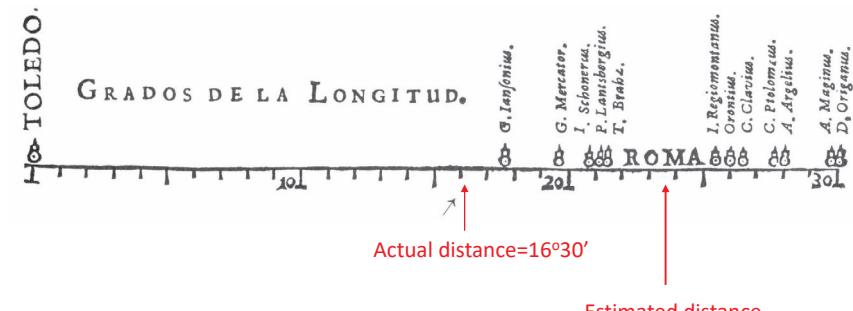

1626: Christoph Scheiner invents helioscope & camera obscura to record sunspots (*Rosa Ursina sive Sol*, 1626-1630)

22

## Why the 1<sup>st</sup> statistical graph got it right

1644: First visual representation of statistical data: determination of longitude between Toledo and Rome- Michael Florent van Langren, Spain

BC	AD	17th C	18th C	19th Century	20th Century	2000
1000	1600	1700	1800	1900	2000	

200

## What else could he have done?

- What would occur to men of his time to convey a message to the king?
- ... he could used a *table* have sorted by *year* to establish *priority* (or show change).

Sorted by Priority			
Year	Name	Longitude	Where
150	Ptolomeus, C.	27.7	Egypt
1471	Regiomontanus,	25.4	Germany
1501	Ianfonius, G.	17.7	
1530	Lantsbergius, P.	21.1	
1536	Schonerus, I.	20.8	Germany
1541	Argelius, A.	28.0	
1542	Ortonius	26.0	France
1567	Mercator, G.	19.6	Flanders
1567	Clavius, C.	26.5	Germany
1578	Brahe, T.	21.5	Denmark
1582	Maginus, A.	29.8	Italy
1601	Organus, D.	30.1	

25

- ... he could have sorted by *name*, to show *authority*.

Sorted by Authority			
Name	Longitude	Year	Where
Argelius, A.	28.0	1541	
Brahe, T.	21.5	1578	Denmark
Clavius, C.	26.5	1567	Germany
Ianfonius, G.	17.7	1501	
Lantsbergius, P.	21.1	1530	
Maginus, A.	29.8	1582	Italy
Mercator, G.	19.6	1567	Flanders
Organus, D.	30.1	1601	
Ortonius	26.0	1542	France
Ptolomeus, C.	27.7	150	Alexandria
Regiomontanus, I.	25.4	1471	Germany
Schonerus, I.	20.8	1536	Germany

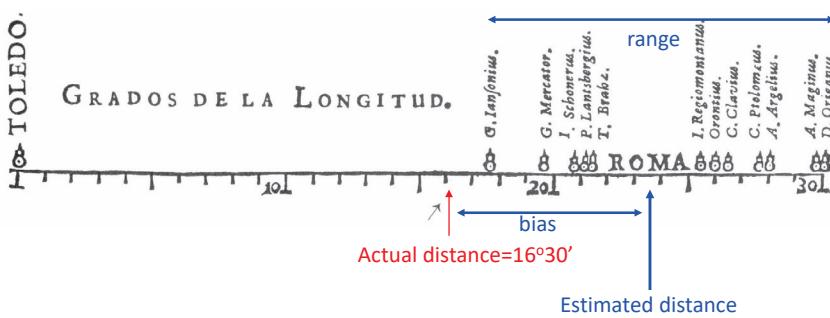

Sorted by Longitude

Longitude	Name	Year	Where
17.7	G. Ianfonius	1501	
19.6	G. Mercator	1567	Flanders
20.8	I. Schonerus	1536	Germany
21.1	P. Lantsbergius	1530	
21.5	T. Brahe	1578	Denmark
25.4	I. Regiomontanus	1471	Germany
26.0	Ortonius	1542	France
26.5	C. Clavius	1567	Germany
27.7	C. Ptolomeus	150	Egypt
28.0	A. Argelius	1541	
29.8	A. Maginus	1582	Italy
30.1	D. Organus	1601	

26

## Only a graph shows...

- central location
- bias
- name labels— avoiding overplotting
- wide variability
- clustering, detached observations

See: Friendly, M., & Kwan, E. (2003). Effect Ordering for Data Displays. *Computational Statistics and Data Analysis*, 43(4), 509–539;  
Friendly et al (2010). The First (Known) Statistical Graph: Michael Florent van Langren and the "Secret" of Longitude  
*The American Statistician*, 64, 185–191

27

## 1700-1799: New graphic forms

- The 18<sup>th</sup> century witnessed the germination of the seeds of visualization & visual thinking, planted earlier.
- Map-makers began to try to show more than just geographical position-- the beginnings of **thematic mapping** of physical quantities
  - topographical maps
  - iso-contour maps
- New graphic forms were invented:
  - bar chart,
  - line chart,
  - timelines

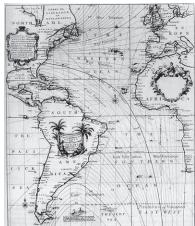

The Big Bang

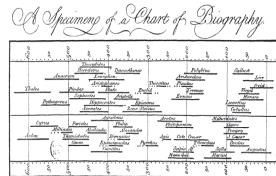

3

## 1700-1799: New graphic forms

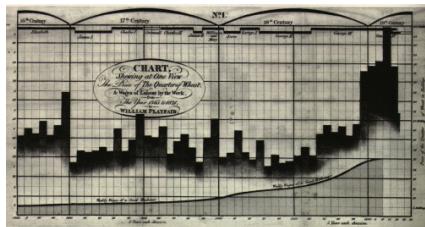

1701: Isobar map, lines of equal magnetic declination – Edmund Halley

1765: Historical time line (life spans of famous people) Joseph Priestley

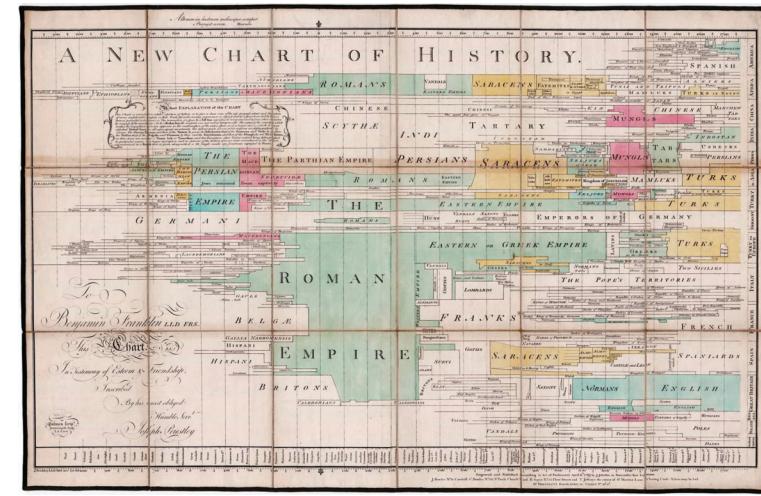

1786: Bar chart, line graphs of economic data- William Playfair

1782: First topographical map- Marcellin du Carla-Boniface

1769: Visualization of the history of civilizations & empires over ~3000 years --Joseph Priestley

America  
China

Italy  
France  
Spain

30

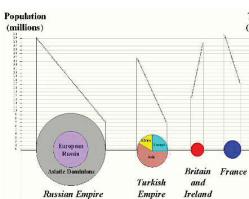

## 1800-1849: Beginning of modern data graphics

- The first half of the 19<sup>th</sup> century witnessed an explosive growth in statistical graphics and thematic mapping
  - Polar coordinates, log axes
  - Shaded (choropleth) maps of social data (literacy, crime)
- The **birth of data**: widespread national collection of data on social and medical issues
  - France: data on crime, literacy, prostitution, ... collected centrally
  - England: Births, deaths, disease mortality collected by Registrar General

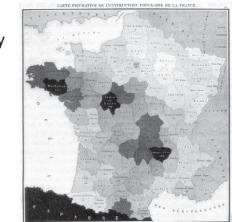

## 1800-1849: Beginning of modern data graphics

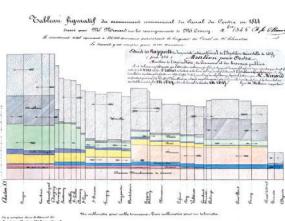

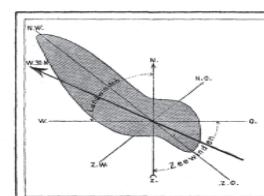

1801: Pie chart, circle graph invented- William Playfair

1826: First modern statistical map (illiteracy in France)- Charles Dupin

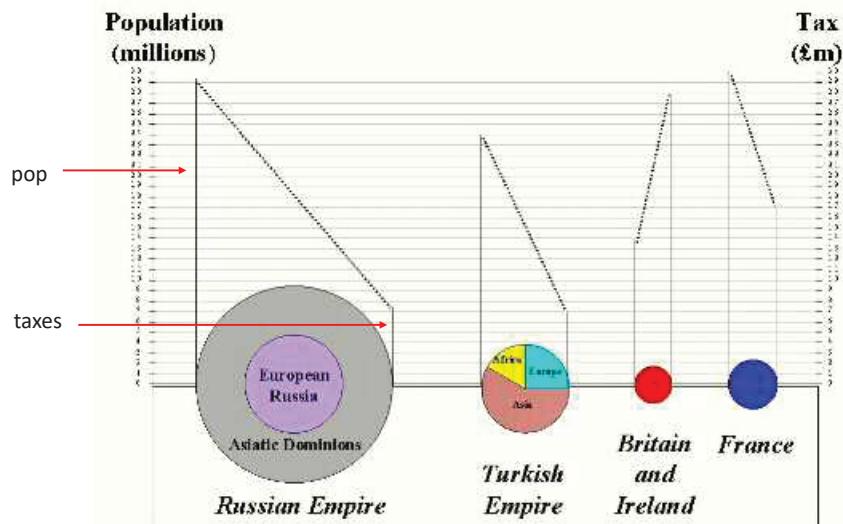

1843: Wind-rose (polar coordinates)- L. Lalanne

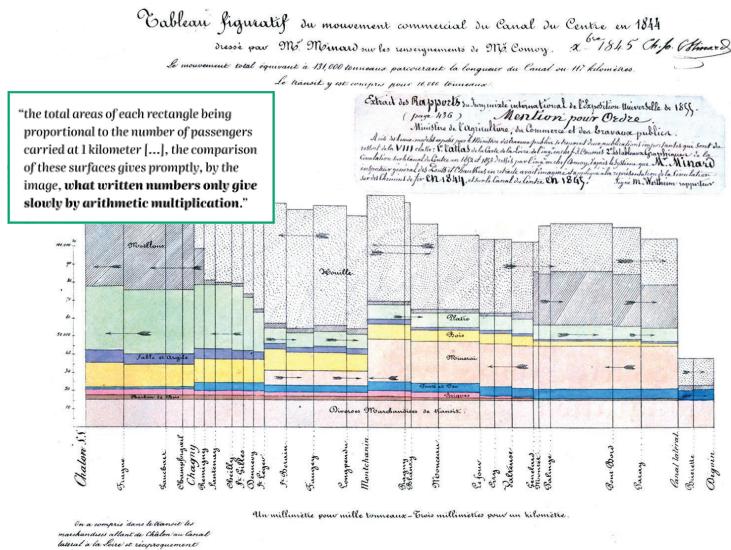

1844: variable-width, divided bars, area ~ cost of transport- C. J. Minard

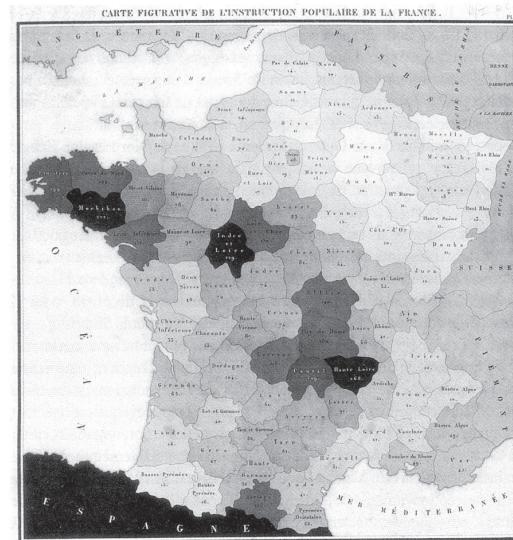

**1801:** Pie chart, circle graph invented- William Playfair

**1844:** Tableau-graphique: variable-width, divided bars, area ~ cost of transport- Charles Joseph Minard

**1826:** The 1<sup>st</sup> choropleth map, showing the distribution of literacy in France – Baron Charles Dupin

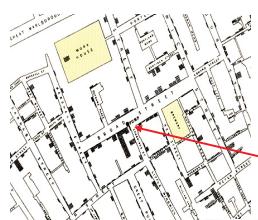

- visual
- subject to scientific discussion

## 1850-1900: Golden Age

- By the last half of the 19<sup>th</sup> century the conditions for rapid growth of visualization had been established:
    - widespread data collection for planning, commerce, social theory
    - the beginnings of statistical theory and visual thinking
    - a wide range of graphic forms, reasonably well understood
    - technology:
      - lithography and color printing
      - automatic recording devices
      - calculation: machines & graphical calculators
  - The result was a perfect storm-- among the most exquisite graphics ever produced.

## 1850-1900: Golden Age

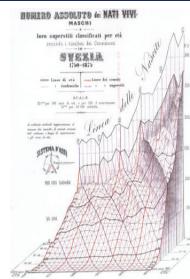

1855: Dot map of disease data (cholera)- John Snow

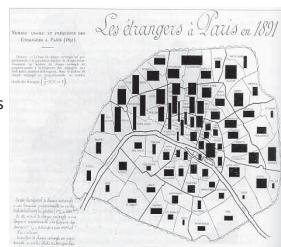

1884: Recursive multi-mosaic on a map- Emile Cheysson

1879: Stereogram (3D population pyramid)- Luigi Perozzo

1896: Area rectangles on a map to display two variables and their product- Jacques Bertillon

## E.-J. Marey: Chronophotography

Rather than separate frames, Marey's "fusil photographique" allowed one to see motion continuously in a single static image.

This provides a visual analysis of a sprint:

- The runner takes about  $\frac{1}{2}$  second (7 frames) to make it to an upright position
- Successive frames alternate between power push from the hind leg to landing on the opposite leg

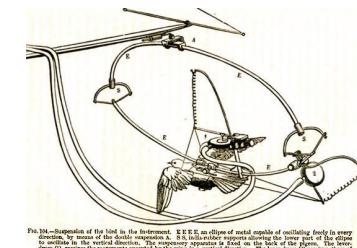

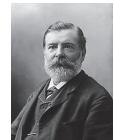

Source: <https://lightsmellscloud.wordpress.com/tag/etienne-jules-marey/>

40

## E.-J. Marey: *La Méthode Graphique*

- How to make human and animal motion subject to precise scientific study?
- e.g., aerial locomotion of flying insects & birds
  - What is the frequency of wings of different species?
  - What are the mechanisms of wings to produce lift and forward motion?

A harness, designed to register the trajectory, force and speed of a bird's wing in flight

Marey (1870) *Animal Mechanism*

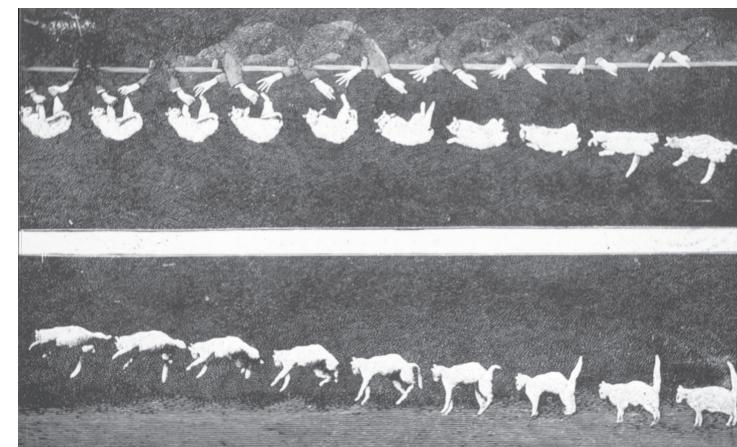

Fig. 14.—Suspension of the bird in the instrument. E E E E: an ellipse of metal mesh of oscillating freely in every direction, to oscillate in the vertical direction. The suspensory organ is fixed on the back of the plenum. The lever moves the oscillations caused by the wing in a vertical direction. The lever itself reserves those of horizontal movements.

39

## The Falling Cat Problem

Another fundamental problem answered by chronophotography:

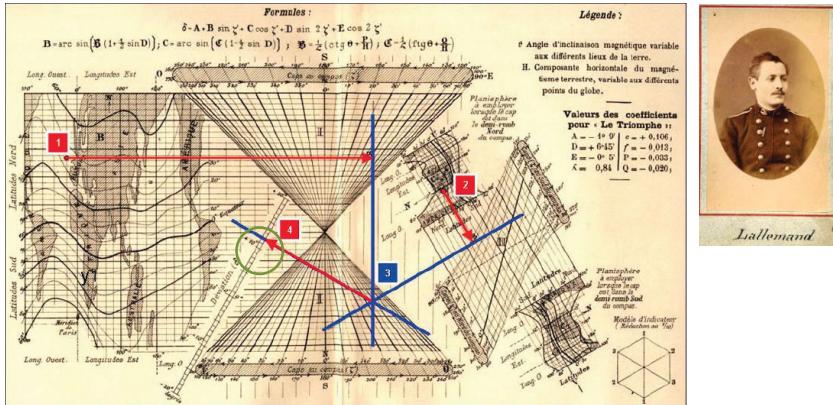

- How does a falling cat usually land on her feet? An OMG moment!

41

# Nomography

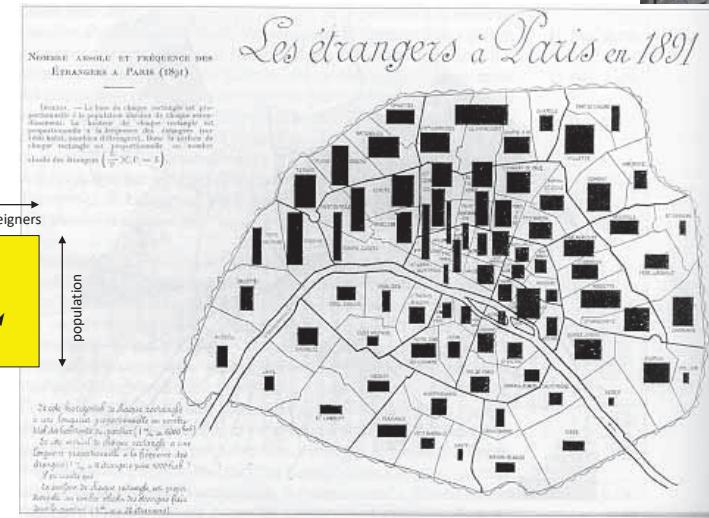

**1885:** Charles Lallemand, graphical calculator for compass course corrections of a ship at sea  
combines: anamorphic maps, hexagonal coordinates, trigonometric scales (5 eqns)

<https://deadreckonings.files.wordpress.com/2010/05/lallemandhexagonalcharttriangularcoordinates.pdf>

42

**1896:** Area rectangles on a map to display two variables and their product- Jacques Bertillon

## 1900-1949: The Modern Dark Ages

- By the 1930s, the growth of statistical methods supplanted enthusiasm for graphics
  - There were few graphic innovations
  - In statistics: numbers were precise; graphs were just “pretty pictures”
- But graphical methods had entered the mainstream & were popularized
  - Text books, college courses
- There were several graphic-based scientific discoveries
- Electronic computers were born

## 1900-1949: The Modern Dark Ages

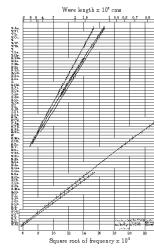

**1914:** Brinton: *Graphic Methods for Presenting Facts*

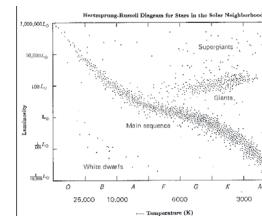

**1924:** ISOTYPE method of pictorial graphics—Otto Neurath

**1913:** Discovery of atomic number, based on graphical analysis- H. Moseley

**1911-1913:** The Hertzsprung-Russell diagram & evolution of stars

**1944:** Harvard's Mark I, the first digital computer- Howard Aiken, Grace Hopper

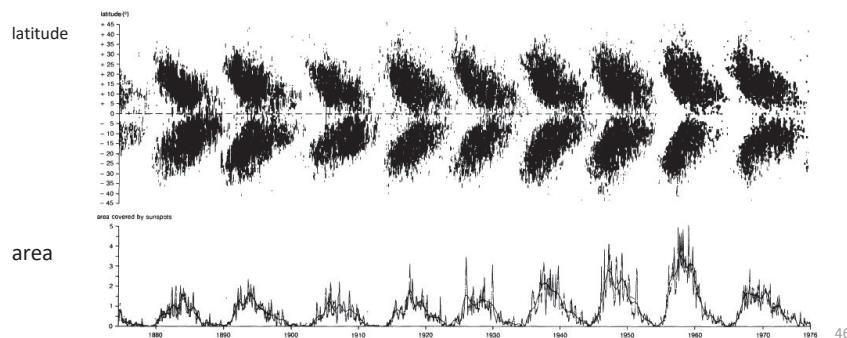

45

# Maunder: Butterfly diagram

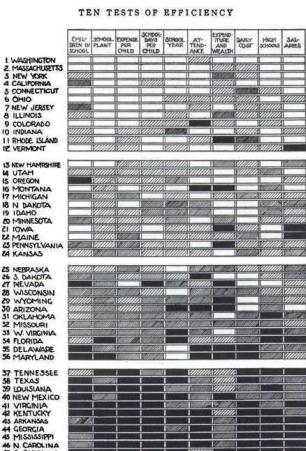

1904: E.W. Maunder plots distribution of sunspots in sun's latitude by time

- Discovery of 11-year sunspot cycles (& 22-yr: reversal of sun's magnetic field)

1914: Willard C. Brinton publishes *Graphic Methods for Presenting Facts*, the 1<sup>st</sup> popular book on the topic

heatmap

pictogram

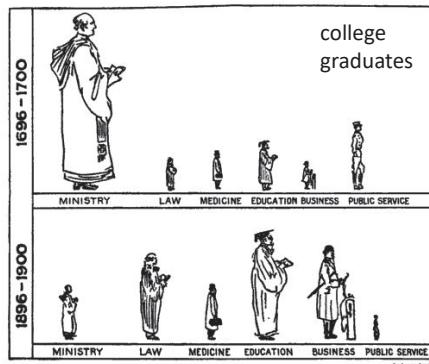

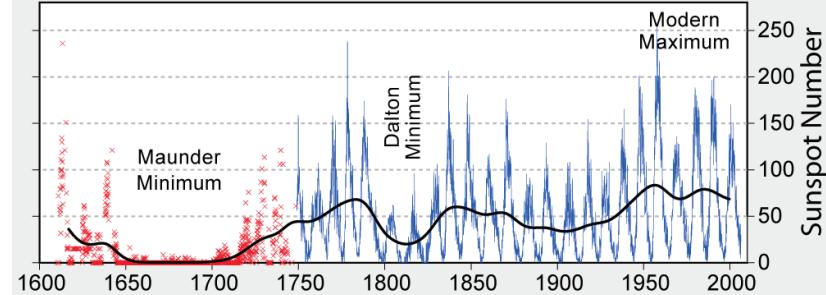

Fig. 39. Proportion of College Graduates in Different Professions in 1696-1700 and in 1896-1900  
Charts of this kind with men represented in different sizes are usually so drawn that the data are represented by the height of the man. Such charts are misleading because the area of the pictured man increases more rapidly than his height. Considering the years 1696-1700, the pictured minister has about two and one-half times the area of those engaged in public service. The minister looks over-imported, because he has an area of more than six times that of the man drawn to represent public service. This kind of graphic work has little real value.

# Maunder: Butterfly diagram

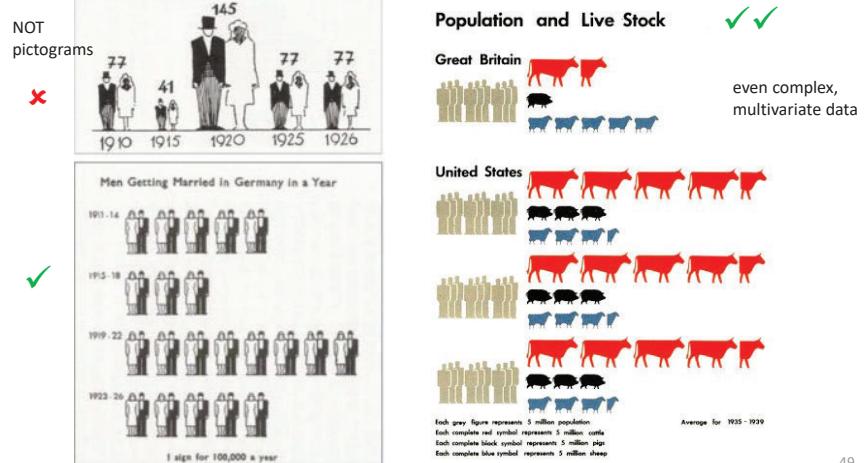

1904: E.W. Maunder plots distribution of sunspots in sun's latitude by time

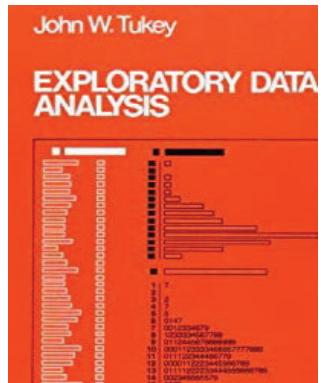

- Discovery of “Maunder minimum” (1645-1715): “Little Ice Age”
- Smoothing reveals other extrema

## 400 Years of Sunspot Observations

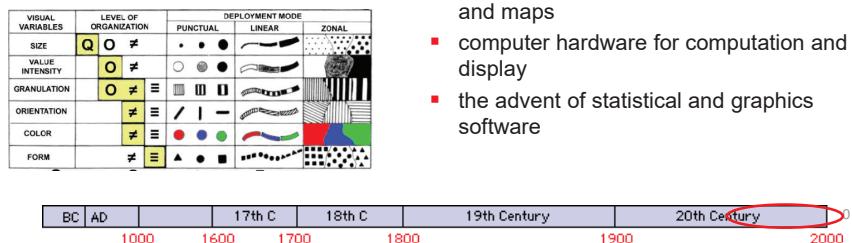

1924: Otto Neurath developed the **Isotype** (International System of Typographic Picture Education) method to communicate statistical information to the broad public in an intuitive, pictorial way.

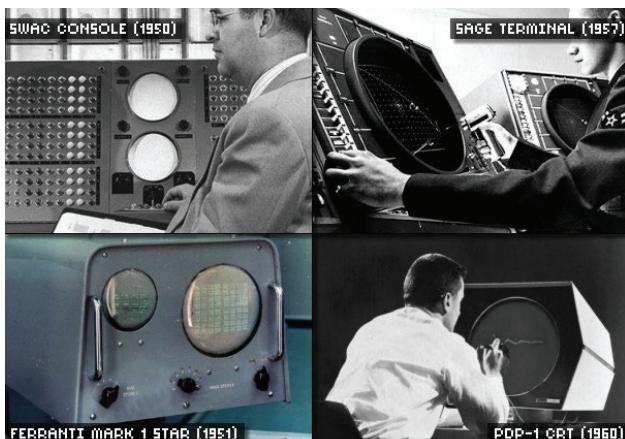

# 1950-1974: Re-birth of graphics

- Visualization began to rise from dormancy in the mid 1960s, spurred largely by:
    - J. W. Tukey's *Exploratory Data Analysis*: The power of graphics to show the unexpected in data analysis
    - Jacques Bertin's *Semiologie Graphique*: A general theory of composing graphs and maps
    - computer hardware for computation and display
    - the advent of statistical and graphics software

## Digital display devices

The biggest limitation in the early development of dynamic and interactive graphics was in graphics display devices.

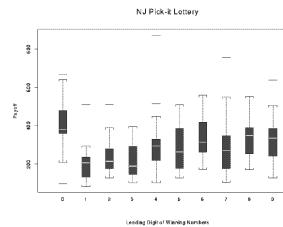

Only B/W, but for the first time, **dynamic** displays became possible.

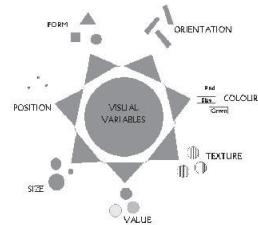

By the late 1950s, pen-like input devices allowed rudimentary direct interaction

## 1950-1974: Re-birth of graphics

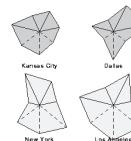

**1969:** Graphical innovations for EDA (stem-and-leaf, box-plots, etc.)- J.W. Tukey

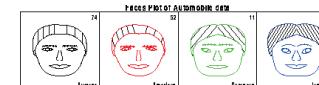

**1967:** Comprehensive theory of graphical symbols & graphics representation- Jacques Bertin

## Multivariate glyphs

1971: Star plots- J. H. Siegel et al

**1973:** Face plots- Herman Chernoff

1975-present

## Technology:

- Progressively more powerful computation & graphics
    - Mainframes → PCs → workstations → servers → cloud computing
    - pen plotters → CRTs → graphics hardware & firmware
    - stand-alone → client-server architecture
  - Internet
    - email → bitnet -> file sharing (FTP) → www (HTML) → Java → javascript
    - data: open data initiatives (~1995) → APIs (census, health, ...)
    - eCommerce: Amazon, Netflix, ... → BIG data, recommender systems
  - Software
    - Graphics packages: SYSTAT, Data Desk, XGobi, ViSta
    - Statistical packages: SAS, SPSS
    - Statistical programming environments: R, matlab, Stata
    - Contributed package archives: CTAN (latex), CPAN (perl), CRAN (R)
    - Collaborative development sites: github, bitbucket, ...

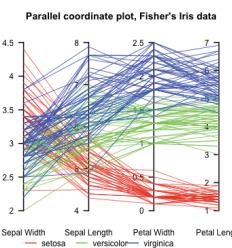

## 1975-present

Themes in data visualization:

- high-D problems of progressively higher dimensions
  - grand tour: n-D → 2D projections
  - Dimension reduction methods (PCA, MDS, biplots)
- graphics & methods for other data types:
  - categorical, frequency data,
  - networks, trees, ...
  - text (word clouds, ...)
  - spatial data & models
- interactive data vis
  - linked views
  - direct manipulation: select, zoom, filter
  - dynamic graphics & animation

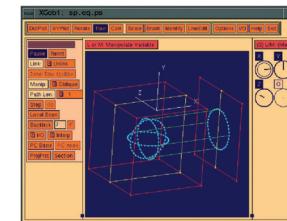

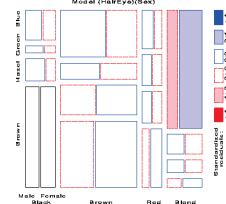

54

## 1975-present

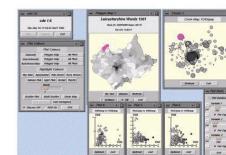

1985: Parallel coordinates plots for high-D data-Alfred Inselberg

1991: Mosaic display for visual analysis of log-linear models-Michael Friendly

1991-1996: High-interaction systems for data analysis and visualization, e.g., XGobi, ViSta

1996: Cartographic Data Visualiser – Jason Dykes

55

## Tukey: PRIM-9

1973: a group at the Stanford Linear Accelerator developed PRIM-9

- Picturing, Rotating, Isolation, Masking in up to 9 dimensions
- \$400K graphic display & keypad; computations on a mainframe, \$500/hr

PRIM-9 Movie: <https://www.youtube.com/watch?v=sN2gCCd2Rr8>

56

## Next steps: Hardware

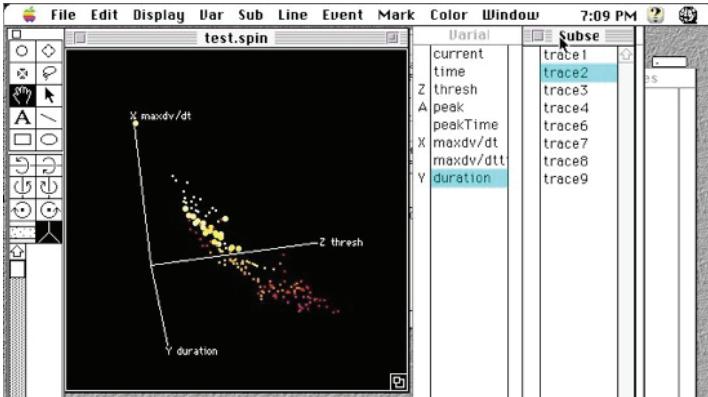

- Dynamic 3D graphics was painfully slow for larger data sets.
- Specialized 3D graphics hardware:
  - Early 1970s: Simple LSI graphics chips for video games
  - 70s–80s: Graphics co-processors (GPUs) with increasing graphics capabilities
  - 80s–90s: Silicon Graphics develops high-performance 3D graphics workstations

57

## Software

- MacSpin – Andrew & David Donoho (1984—85). At ASA meetings 1986, “dynamic graphics became as portable as a 25-lb Macintosh”

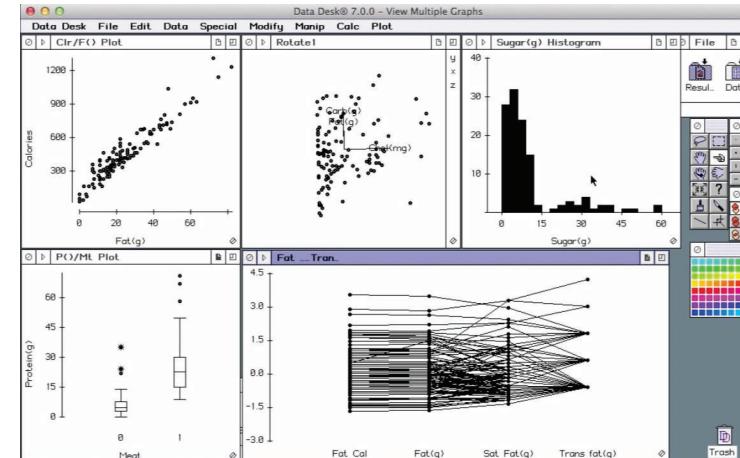

58

## Linking, brushing, 3D rotation

Paul Velleman (~1985): Data Desk provided multiple 1D, 2D, 3D views

- **Brushing:** selection of points, regions, ... via mouse
- **Linking:** Any action in one plot reflected in all others

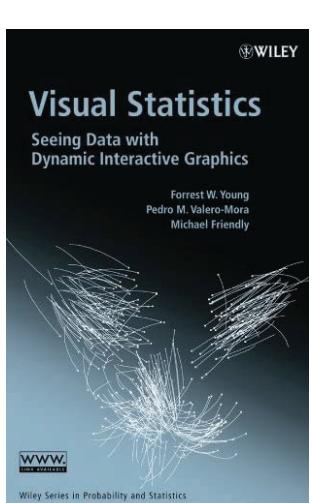

59

## Visual Statistics

Young, Valero-Mora & Friendly (2006)

A philosophy & pedagogy for statistics based on dynamic interactive graphics

A theory of #dataavis software:

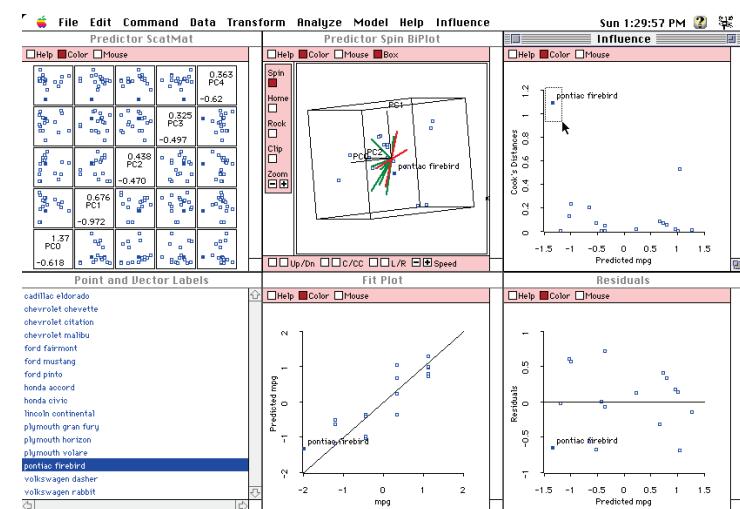

- objects (data, model, ...)
- methods (print, plot, )
- manipulating plot objects & dimensions
- spin plots: rotating 3D plots
- spreadplots: dynamically linked views
- workmaps: visual record of analysis steps

Details: <https://www.uv.es/visualstats/>

See: The History of ViSta: The Visual Statistics System, <https://onlinelibrary.wiley.com/doi/full/10.1002/wics.1203>

60

## ViSta: Visual Statistics

61

## Summary

- Data Visualization has deep & wide roots:
  - **Cartography:** map-making, geo-measurement, thematic cartography, GIS, geo-visualization
  - **Statistics:** probability theory, distributions, estimation, models, stat-graphics, stat-visualization
  - **Data:** population, economic, social, moral, medical, ...
  - **Visual thinking:** geometry, functions, mechanical diagrams, EDA, ...
  - **Technology:** printing, lithography, computing...
- **Problem driven:** developments often driven by practical and theoretical problems of the day
- **Communication driven:** developments often arose from a desire to communicate better

62

## Conclusions

- Why study the history of data visualization?

*"The only new thing in the world is the history you don't know"* – Harry S. Truman  
*"Those who cannot remember the past are condemned to repeat it."* – George Santayana (*The Life of Reason*, 1905)  
*"No scientific discovery is named after its original discoverer"* – Stigler's Law of Eponomy (1980). But: originally due to Merton!
- Today:
  - Narrow, specialized work in many fields
  - New methods “invented” and re-named w/o knowing history.
    - mosaic displays: Georg von Mayr (1877)
    - heatmaps: Loua (1873); Brinton (1914), Bertin (1967)
    - Nightingale (1859) rose diagram: polar diagrams by Guerry (1829), Lalanne (1843)

63
